MEASURES OF DEPARTMENTAL PERFORMANCE

*(This page is intentionally left blank for duplexing purposes.)*

## Greetings from MoDOT

When I came to MoDOT as director late last year, I was pleased to find in place a system of performance metrics that validate our commitment to the citizens of Missouri. MoDOT has a proud legacy of wisely managing our system and meeting challenges in order to delight our customers and promote a prosperous Missouri.

Whether managing floods, repairing roads and bridges or fighting snow, the men and women of MoDOT work tirelessly to keep our citizens and themselves safe as we maintain 34,000 miles of roads and 10,400 bridges. While this report highlights the measures used to monitor our commitment of a world-class transportation experience for Missourians, it is really a testament to the bold ingenuity of our employees who design, build, maintain and operate our \$50 billion transportation assets.

Despite limited resources, MoDOT has been diligent about maintaining our system in the best condition we can for as long as we can.

However, citizens have asked for more transportation options, and I believe they deserve more. It is critical to build a 21<sup>st</sup> century transportation system today in order to fuel our economy and retain our workforce.

With last year's passage of the FAST Act, we have some degree of federal funding certainty for the next five years. But because those funds only come in a one-to-four match with state money, we must keep the effort alive to boost our level of state investment in transportation. Without additional revenues, we will be unable to tackle many of the projects that Missourians have told us they desire.

Instead, we'll need to put every dollar into asset management, and even then, some of our districts will lose ground.

A healthy transportation infrastructure ensures businesses can operate and grow. It ensures the state can prosper and jobs can be created. Essentially, transportation is what keeps Missouri moving.

The pages that follow will highlight many innovations and improvements. But there is more to be done. I ask that you join me in making the transportation system in our great state all that it can and needs to be.

With warm regards,

A handwritten signature in black ink, reading "Patrick K. McKenna". The signature is written in a cursive, flowing style.

Patrick K. McKenna

### Mission

*Our mission is to provide a world-class transportation experience that delights our customers and promotes a prosperous Missouri.*

# MoDOT VALUES

## TANGIBLE RESULTS

KEEP CUSTOMERS AND OURSELVES SAFE

*Mark Shelton, District Engineer*

**Tracker**

MEASURES OF DEPARTMENTAL PERFORMANCE

Safety is a daily commitment for all MoDOT employees. From design and construction to operations and maintenance of the state transportation system, the safety of our customers, partners, and employees is our top priority. We work with our safety partners to promote safe behavior for all users and modes of transportation so everyone goes home safe every day.

**RESULT DRIVER:**

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## Number and rate of fatalities and serious injuries – 1a

**MEASUREMENT DRIVER:**

Bill Whitfield  
Highway Safety Director

**PURPOSE OF THE MEASURE:**

The fatal and serious injury number measures track quarterly, annual and five-year average trends resulting from traffic crashes on all Missouri roadways.

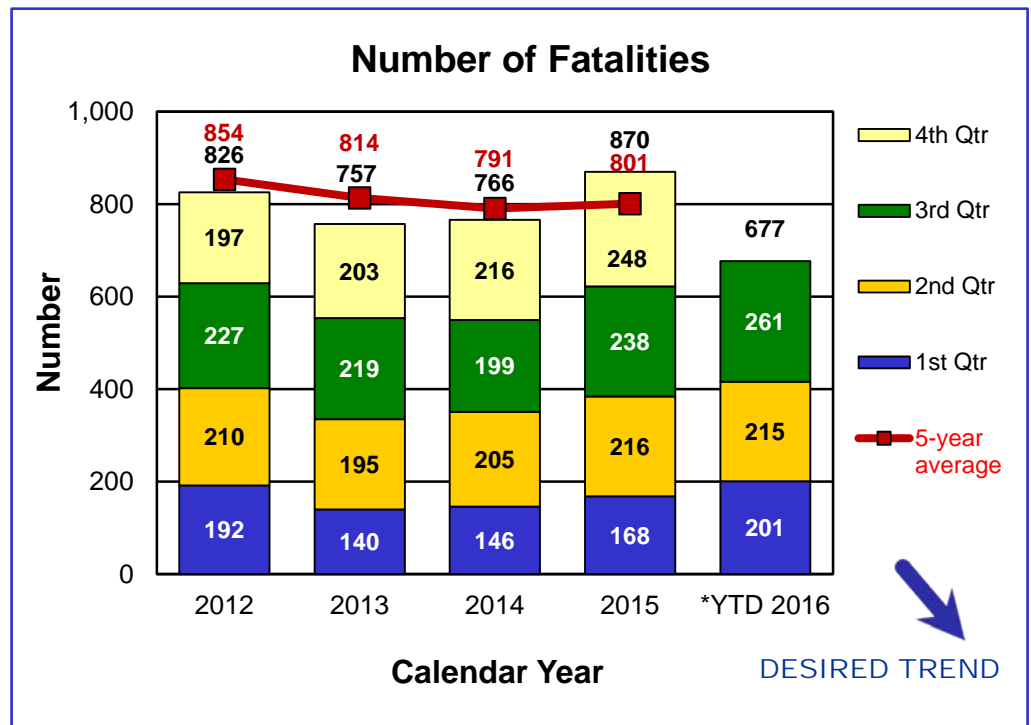

Traffic crash prevention is one of MoDOT’s highest priorities. In 2015, Missouri experienced 870 fatalities, resulting in a 14 percent increase over 2014. Of those fatalities, 63 percent were unbuckled when the crash occurred. This unbuckled trend has fluctuated from a high of 71 percent in 2013 to current levels.

Crash data from 2010 to 2014 showed the leading contributing circumstances that can be attributed to driver behavior were substance impaired driving, driving too fast for conditions, distraction/inattention, exceeding the speed limit, following too closely and fatigue. Crash statistics also showed impaired drivers had an unbuckled fatality rate of 87 percent. This group of drivers makes two deadly decisions: to drive impaired and unbelted. Once 2015 MSHP crash files are closed, more extensive analysis will be completed.

Unofficial reporting for the first three quarters of 2016 shows 677 fatalities on Missouri roadways, which is a 9 percent increase from the same time last year.

**MEASUREMENT AND DATA COLLECTION:**

Missouri law enforcement agencies submit a vehicle accident report form to the Missouri State Highway Patrol to be entered into a statewide traffic crash database. The database automatically updates MoDOT’s crash database system, which is part of the Transportation Management System. The rate of fatal and serious injury charts display annual and five-year average fatality and injury rates per 100 million vehicle miles traveled for these same crashes. In addition, the fatality rate chart includes the national average.

\*YTD 2016 – Third quarter fatalities were derived from MSHP radio reports.

# KEEP CUSTOMERS AND OURSELVES SAFE

\*2016 – Due to a backlog of crash reports into STARS, the serious-injury measure only includes data derived from TMS. Third quarter 2016 data is not available on the MSHRP radio reports and is incomplete in TMS.

## RESULT DRIVER:

Mark Shelton  
District Engineer

## MEASUREMENT

### DRIVER:

Bill Whitfield  
Highway Safety Director

## PURPOSE OF THE MEASURE:

The vulnerable roadway user measure tracks annual trends in fatalities and serious injuries of motorcyclists, pedestrians and bicyclists. These roadway users are at risk for death or serious injury when involved in a motor-vehicle-related crash.

## MEASUREMENT AND DATA COLLECTION:

Missouri law enforcement agencies submit a vehicle accident report form to the Missouri State Highway Patrol to be entered into a statewide traffic crash database. The database automatically updates MoDOT's crash database system, which is part of the Transportation Management System.

# KEEP CUSTOMERS AND OURSELVES SAFE

## *Number of vulnerable roadway user fatalities and serious injuries – 1b*

In 2015, vulnerable roadway users were 24 percent of the total number of fatalities. Pedestrian fatalities increased in 2015 by 51 percent. Motorcycle fatalities increased by 6 percent and bicycle fatalities increased by 125 percent.

Motorcycle and bicycle serious injuries increased in 2015, meanwhile pedestrians decreased. Serious injury data for 2015 is incomplete.

# KEEP CUSTOMERS AND OURSELVES SAFE

## RESULT DRIVER:

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## *Number of fatalities and serious injuries resulting from the most frequent crash causes – 1c*

## MEASUREMENT DRIVER:

John Miller  
Traffic Liaison Engineer

## PURPOSE OF THE MEASURE:

The measure tracks annual trends in motor-vehicle-related fatal and serious injuries resulting from the most common contributing factors or highway features. This data represents six of the top focus areas presented in Missouri's Blueprint to Save More Lives.

## MEASUREMENT AND DATA COLLECTION:

Missouri law enforcement agencies submit a vehicle accident report form to the Missouri State Highway Patrol to be entered into a statewide traffic crash database, which is part of the Transportation Management System. MoDOT staff query and analyze this data to determine the number of unrestrained occupants in crashes, how often aggressive driving, alcohol and other drugs contribute to crashes, and whether or not the vehicles ran off the road, the crash occurred in a curve, or the crash occurred at an intersection.

The Highway Patrol experiences a lag in data entry each year which prohibits MoDOT from using current complete crash data. This lag is being reduced through a combination of efforts involving not only manual data entry, but also an increased emphasis in electronic data entry.

Recording and monitoring crash data is an important part of improving safety for Missouri drivers. But without looking at the causes of these incidents, the data is nothing but numbers. Looking for the reasons why an incident occurs is MoDOT's best approach to address the problem. With that approach, the department finds the most frequent causes continue to be a mix of engineering and behavioral issues.

The general trend for fatalities is no longer declining in Missouri, but instead beginning to increase. The serious injuries trend is beginning to level off. Comparing the number of fatalities in 2014 to 2015 shows large increases in unrestrained occupants (12 percent), aggressive driving (10 percent), alcohol and/or other drugs (10 percent), and intersection related (50 percent), moderate increases in run-off-road (3 percent) and an actual decrease in curve related (6 percent reduction). Comparing the number of serious injuries in 2014 to 2015 shows moderate decreases in unrestrained occupants (1 percent), run-off-road (5 percent), aggressive driving (4 percent), alcohol and/or other drugs (6 percent), curve related (9 percent) and intersection related (4 percent).

With increased traffic on Missouri roadways, it will be difficult to change the current trends for each of these causes. The primary current initiatives include adding shoulders and rumble strips to minor roads, installing high-friction surface treatments and improving intersection safety. While driver behavior is difficult to correct, MoDOT continues to focus on using funds to target locations and behaviors based on crash data analysis.

# KEEP CUSTOMERS AND OURSELVES SAFE

**RESULT DRIVER:**

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## Number of fatalities and serious injuries in work zones – 1d

**MEASUREMENT  
DRIVER:**

Julie Stotlemeyer  
Traffic Liaison Engineer

**PURPOSE OF  
THE MEASURE:**

This measure tracks the number of traffic-related and non-traffic-related fatalities, injuries and overall crashes occurring in work zones on state-owned roadways.

**MEASUREMENT AND  
DATA COLLECTION:**

Missouri law enforcement agencies submit a vehicle accident report form to the Missouri State Highway Patrol to be entered into a statewide traffic crash database. The database automatically updates MoDOT's crash database system, which is part of the Transportation Management System. MoDOT staff query and analyze this data to identify work zone related crash statistics. MSHP prioritizes entry of the crash reports by fatality, serious injury and then property damage only.

Work zone safety is at the center of MoDOT's safety culture. It is a driving force in all maintenance and construction work. Just as MoDOT expects its crews to be safe and visible, it also expects contractors and utility companies to provide safe work zones and visible workers. This is demonstrated by the partnership MoDOT has with contractors and utility companies using the same personal protection equipment it uses. Staying safe in work zones also is a partnership the department shares with the driving public. MoDOT wants everyone to get home safely. While MoDOT makes every effort to work safely, motorists need to pay attention, slow down, move over, buckle up and drive without distractions.

Based on information currently available, there have been five work zone crashes that resulted in five fatalities in Missouri in 2016. Of these fatalities, three were unbuckled and one was a flagger. Two crashes involved large trucks and three crashes occurred on divided highways. One was a rear-end crash and two were head-on crashes.

\*YTD 2016 – Fatalities derived from TMS.

# KEEP CUSTOMERS AND OURSELVES SAFE

## Number of Serious Injuries in Work Zones

## Number of Crashes in Work Zones

\*YTD 2016 – Due to a backlog of crash reports into STARS, these measures are not final and only illustrate data derived from TMS. Third quarter 2016 data is unavailable through the MSHR radio reports and is incomplete in TMS.

**RESULT DRIVER:**

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## Percent of seat belt/passenger vehicle restraint use – 1e

**MEASUREMENT DRIVER:**

Scott Jones  
Highway Safety Program  
Administrator

**PURPOSE OF THE MEASURE:**

This measure tracks annual trends in seat belt use in passenger vehicles. This data drives the development and focus of the Missouri Highway Safety Plan and supports Missouri's Blueprint to Save More Lives.

**MEASUREMENT AND DATA COLLECTION:**

Each June, a statewide survey is conducted at 560 preselected locations in 28 counties. The data collected is calculated into a seat belt usage rate using a formula approved by the National Highway Traffic Safety Administration. Data collection locations represent 85 percent of the state's vehicle occupant fatalities. The data collection plan is the same each year for consistency and compliance with NHTSA guidelines.

Seat belts save lives, but getting people to use them – even to protect their own lives – is a challenge. Public education is one way to keep the issue in front of motorists. Legislation is another. MoDOT supports each approach, attacking the problem with focused marketing campaigns and reinforcing it with hard facts to back legislative efforts. Several municipalities across the state are taking matters into their own hands enacting primary ordinances within city limits. Missouri currently has 53 municipalities and two counties that have adopted primary seat belt ordinances, representing 23.6 percent of the state's population.

Based on 123,678 observations, the seat belt use in Missouri for 2016 was 81.4 percent. Jackson County was the lowest at 63 percent, and Montgomery County was the highest at 95.4 percent. The national average for seat belt use in 2015 was 88 percent. The 2016 data is not yet available. Missouri's national ranking in 2015 was 43<sup>rd</sup>, with only seven states ranking lower in seat belt usage.

States with a primary seat belt law rank highest on seat belt use nationwide. States that have a secondary law continue to rate lowest in national rankings.

## RESULT DRIVER:

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## *Number and rate of fatalities and serious injuries for commercial motor vehicle crashes – 1f*

## MEASUREMENT DRIVER:

Mark Biesemeyer  
Motor Carrier Services  
Program Manager

## PURPOSE OF THE MEASURE:

This measure tracks the number of commercial motor vehicles involved in fatal and serious-injury crashes and compares those annual totals to the number of vehicle miles traveled annually by commercial motor vehicles. MoDOT uses the information to target education, enforcement and improvement of safety features.

## MEASUREMENT AND DATA COLLECTION:

Missouri law enforcement agencies submit a vehicle accident report form to the Missouri State Highway Patrol to be entered into a statewide traffic crash database. The database automatically updates MoDOT's crash database system, which is a part of the Transportation Management System. The rate of fatal and serious-injury charts display the annual fatality and injury rates per 100 million vehicle miles traveled for commercial motor vehicles for these same crashes. Crash rate data is reported annually.

Commercial motor vehicles are the lifeblood of Missouri's economy. They transport the goods and materials that keep the nation moving. Partnering with the Missouri State Highway Patrol and St. Louis and Kansas City police departments, MoDOT does everything in its power to keep CMV drivers safe and their vehicles on the road. By tracking the number of CMV crashes resulting in fatalities and serious injuries, MoDOT can target education and enforcement efforts, and also improve safety features such as highway signs, reflective pavement markings, guard cables, rumble strips and incident management alert signs.

Between 2011 and 2015, fatal crashes involving a CMV increased by 4.7 percent, and the fatality crash rate increased from 1.43 to 1.48 per 100 million CMV vehicle miles traveled. In 2015 the 111 fatality crashes Missouri experienced is 10 more than 2014 or a 9.9 percent increase. This resulted in a 2015 crash rate of 1.48 as compared to the 1.42 rate for 2014.

Serious-injury crashes involving a CMV decreased by 18.7 percent and the serious-injury crash rate dropped from 4.69 to 3.75 per 100 million CMV vehicle miles traveled between 2011 and 2015. The 282 serious-injury crashes Missouri experienced in 2015 is five fewer than reported for 2014 or a 1.7 percent decrease. This resulted in a 2015 crash rate of 3.75 as compared to the 3.74 rate for 2014.

# KEEP CUSTOMERS AND OURSELVES SAFE

Due to a backlog of crash reports into STARS, these measures will only illustrate data derived from TMS.

## RESULT DRIVER:

Mark Shelton  
District Engineer

## MEASUREMENT

### DRIVER:

Evan Adrian  
Senior Safety Officer

## PURPOSE OF THE MEASURE:

This measure tracks the number of recordable injuries, in total and as a rate of injuries per 100 workers.

## MEASUREMENT AND DATA COLLECTION:

The calculation for incidence rate is the number of recordables times 200,000 divided by the number of hours worked. The 200,000 used in the calculation is the base for 100 full-time workers (working 40 hours per week, 50 weeks per year). MoDOT defines a recordable incident as a work-related injury or illness that results in death, days away from work or medical treatment resulting in cost to the department. The injury data is collected from Riskmaster, the department's risk management claims administration software. The number of hours worked is taken from MoDOT's payroll data.

# KEEP CUSTOMERS AND OURSELVES SAFE

## *Total and rate of MoDOT recordable incidents – 1g*

MoDOT is dedicated to employee safety. Getting home safely is the responsibility of every employee. To reinforce this value, the "Safety Begins with Me" program reminds all employees that safety is a personal responsibility. Additionally, an agreement is now in place to provide training on "behavior based safety" to employees. It is expected that implementation and practice of behavior based safety will result in fewer recordable incidents.

The number of recordable incidents and the rate of recordable incidents decreased for the first three quarters of 2016 compared to the same period in 2015. Leading causes of incidents during this reporting period were: slips, trips and falls at 19 percent; struck or injured by at 17 percent; cuts/punctures at 15 percent and strains or injuries at 13 percent. Based on the work activity the employee was doing at the time of the incident, 29 percent of these injuries were equipment related. Another 12 percent were related to mowing/brush cutting. Bridge maintenance activities had 10 percent.

# KEEP CUSTOMERS AND OURSELVES SAFE

\* Texas DOT and OSHA private industry data is not yet available for 2015.

## RESULT DRIVER:

Mark Shelton  
District Engineer

# KEEP CUSTOMERS AND OURSELVES SAFE

## *General liability claims and costs – 1h*

## MEASUREMENT

### DRIVER:

Steve Patterson  
Safety and Claims Manager

## PURPOSE OF THE MEASURE:

This measure tracks the number of general liability claims and the amount paid.

## MEASUREMENT AND DATA COLLECTION:

General liability claims arise from allegations of injuries/damages caused by the dangerous condition on MoDOT property and the injury/damage that directly resulted from the dangerous condition. In addition, an employee must be negligent and create the dangerous condition or MoDOT must have actual or constructive notice of the dangerous condition in sufficient time prior to the injury/damage to have taken measures to protect the public against the dangerous condition. Claims data is collected from Riskmaster, the department's risk management claims administration software.

Keeping ourselves and the public safe is MoDOT's top priority. Controlling damage to vehicles and reducing personal injury in work zones, on right of way and other areas under department control helps MoDOT accomplish this goal. Compared to the first three quarters of 2015, there was an 11 percent increase in the number of claims. The majority of claims for the first three quarters of 2016 are attributed to pavement defects. During the same timeframe, there was a 61 percent decrease in the amount paid. The decrease is attributed to fewer multiple large claims being settled the past three quarters. This quarter, payment was made on 151 claims against the department totaling \$746,235.36.

Three claims accounted for 60 percent of this quarter's payments. The department settled a claim occurring in 2009 where a vehicle encountered an icy patch, lost control and struck a bridge abutment causing severe injuries. This case was settled for \$245,000 based on the allegation the bridge abutment should have been protected and the speed limit should have been reduced. The second claim occurred in 2014 when a tractor trailer ran off the road where there was a steep edge drop off. The driver overcorrected, returned to the road and crossed the centerline causing a second tractor trailer to skid in an effort to avoid the first tractor trailer. The second vehicle struck the first one, ran off the road and down an embankment resulting in disabling injuries to the driver. The first vehicle overturned resulting in a fatality. This case was settled for \$100,000 based on the allegation of an edge drop off, narrow shoulder and a non-recoverable slope. The third claim occurred in 2014, when a vehicle ran off the roadway and struck a large rock pile that had been placed there by MoDOT crews. The vehicle overturned and the passenger was thrown from the vehicle and killed. The claimants alleged the lack of level shoulders, eroding culvert and placement of the rock pile contributed to the accident. The case was settled for \$100,000.

# Tracker

MEASURES OF DEPARTMENTAL PERFORMANCE

Missourians have said they want MoDOT to keep roads and bridges in good condition. Customers are looking for smooth pavements and bridges that can safely handle growing traffic demands. With 33,873 miles of highway and 10,394 bridges on the state system, the challenges are great; however, we are focused on using our limited resources to keep Missouri's roads and bridges in good condition.

**RESULT DRIVER:**  
Scott Marion  
Motor Carrier Services Director

## KEEP ROADS AND BRIDGES IN GOOD CONDITION

**MEASUREMENT  
DRIVER:**  
Brian Reagan  
Transportation System  
Analysis Engineer

**PURPOSE OF  
THE MEASURE:**  
This measure tracks the  
condition of Missouri's major  
highways.

**MEASUREMENT AND  
DATA COLLECTION:**  
Missouri's major highway  
system contains the state's  
busiest highways, including  
interstates and most U.S.  
routes. It also includes busy  
routes in urban areas,  
particularly where vehicles  
travel between business  
districts and residential areas.  
There are 5,494 total miles on  
the major highway system, and  
the condition of these  
roadways is determined using  
a variety of measures.

While it can be difficult to  
compare one state's roadways  
to another's, MoDOT uses  
Georgia as a comparable  
system because it has a similar  
amount of major highways and  
also bases its evaluation on  
the smoothness of the  
roadways. Missouri measures  
the condition of its roadways  
using smoothness as one  
factor, but also considers  
physical distresses such as  
cracking.

### *Percent of major highways in good condition – 2a*

Missourians have repeatedly told MoDOT keeping roads smooth is a top priority. Over the years, MoDOT has been able to fund pavement improvement programs greatly improving pavement conditions on the thousands of miles of state highways. Currently, more than 90 percent of major highways are rated in good condition.

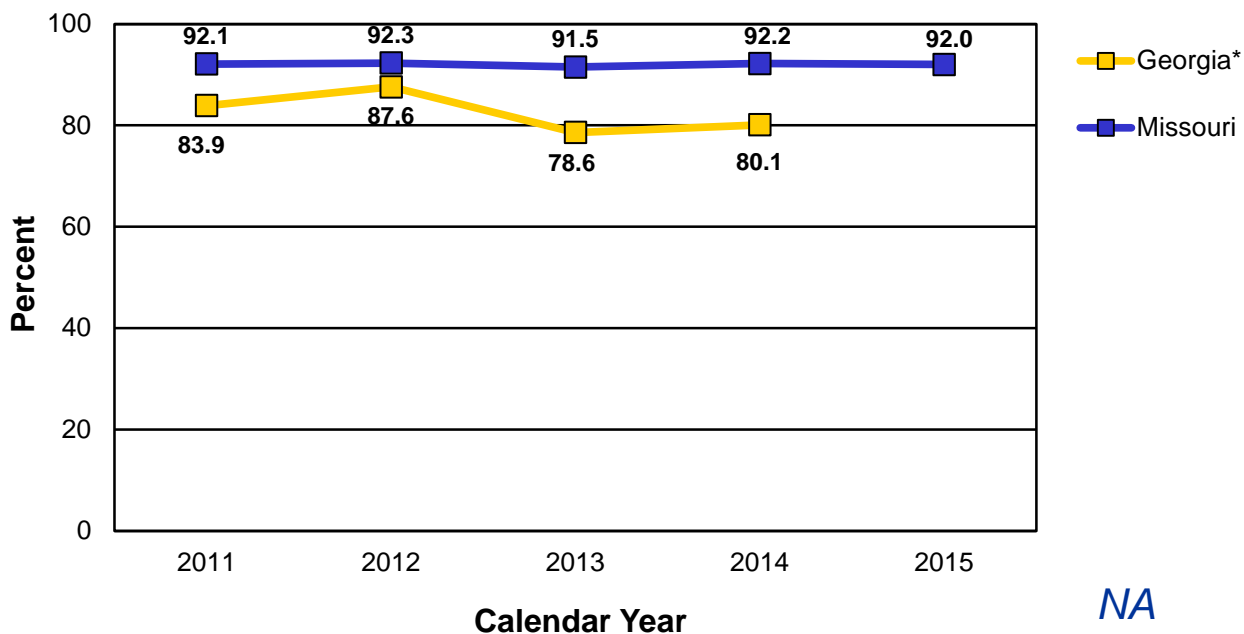

# KEEP ROADS AND BRIDGES IN GOOD CONDITION

## Percent of Major Highways in Good Condition

**85%**  
DESIRED TREND

## Percent of Interstate Highways in Good Condition

DESIRED TREND

\*Source data for Georgia comes from FHWA highway statistics. Full data sets are collected every two years. The data set for 2014 is not a full data set. Georgia data is based only on pavement smoothness (IRI) submitted as part of the Highway Performance Monitoring System.

RESULT DRIVER:  
Scott Marion  
Motor Carrier Services Director

## KEEP ROADS AND BRIDGES IN GOOD CONDITION

### Percent of minor highways in good condition – 2b

MEASUREMENT  
DRIVER:  
Brian Reagan  
Transportation System  
Analysis Engineer

PURPOSE OF  
THE MEASURE:  
This measure tracks the  
condition of Missouri's minor  
highways.

MEASUREMENT AND  
DATA COLLECTION:  
Missouri's minor highway  
system consists of its less-  
traveled state highways,  
including those routes that  
mainly serve local  
transportation needs. The  
minor highway system includes  
most lettered routes. There are  
28,379 miles of minor  
highways in Missouri. The  
condition of these routes is  
determined using a variety of  
measures.

While it can be difficult to  
compare one state's roadways  
to another's, MoDOT uses  
Illinois as a comparable system  
because it has a similar  
number of minor highways.  
Missouri measures the  
condition of its roadways using  
smoothness as one factor, but  
also considers physical  
distresses such as cracking.

Although minor roads are less traveled, Missourians still say keeping them in good condition is a priority. During the early 2000s, MoDOT's focus was on improving major highways. This resulted in less work being done on minor roads and declining condition ratings. Over the past few years, success on major highways has allowed the department to focus more time and funding on improving minor highways.

Currently, 78 percent of Missouri's minor highways are in good condition, which is slightly below 2014.

\*Source data for Illinois comes from FHWA highway statistics. Data for 2015 is not available at the time of publication. Data is based on a combination of pavement condition and smoothness as submitted as part of the Highway Performance Monitoring System.

RESULT DRIVER:  
Scott Marion  
Motor Carrier Services Director

## KEEP ROADS AND BRIDGES IN GOOD CONDITION

### *Condition of state bridges – 2c*

MEASUREMENT  
DRIVER:  
David Koenig  
Bridge Management Engineer

PURPOSE OF  
THE MEASURE:  
This measure tracks progress  
toward improving the condition  
of Missouri's bridges.

MEASUREMENT AND  
DATA COLLECTION:  
This measure is updated in  
April based on MoDOT  
inspections conducted the prior  
year. Data is presented for all  
state bridges and major  
bridges. Major bridges are  
typically those that cross large  
rivers and lakes and are longer  
than 1,000 feet. Of the 10,394  
bridges on state highways, 206  
are major. Bridges are  
categorized as being in good,  
fair or poor condition. Good  
means no significant condition-  
related problems exist. Fair  
indicates moderate problems  
that may require minor  
rehabilitation or maintenance  
to return the structure to good  
condition. Poor indicates a  
structure that is deficient,  
requiring either replacement or  
a major rehabilitation.

The public has indicated the condition of Missouri's existing roadway system should be one of the state's highest priorities. Currently, 1,898 (47 major) structures are in poor condition, 4,942 (107 major) structures are in fair condition and 3,554 (52 major) structures are in good condition.

Statewide, the number of structures in poor condition has steadily decreased over the last five years, but the rate of decline is slowing down. The number of structures in good condition peaked in 2011 and has been declining since. The gradual decrease in the number of poor condition structures is attributable to a significant focus in the STIP on taking care of the worst bridges with the limited funds available. The decline in good bridges demonstrates the fact that the construction program has slowed down with the number of bridges being taken care of within a year being fairly close to the number that are becoming poor condition. This is shown by comparing the drop in poor condition bridges of 310 to the drop in good condition bridges of 253 over the five-year period. The number in fair condition continues to significantly increase which is reflective of MoDOT's aging bridge population with many structures at the point where they need minor maintenance or rehabilitation.

For major bridges, the number of structures in the poor category has generally been dropping over the last five years because of an aggressive focus on these structures in the STIP. However, despite a significant investment in major bridges, the number of structures in good condition generally dropped over the five-year period while the number in fair condition significantly increased. Work on major bridges is expensive with rehabilitations costing \$10 - \$20 million and replacements ranging from \$20 - \$200 million.

# KEEP ROADS AND BRIDGES IN GOOD CONDITION

## Percent of structurally deficient deck area on National Highway System – 2d

**MEASUREMENT DRIVER:**  
David Koenig  
Bridge Management Engineer

**PURPOSE OF THE MEASURE:**  
This measure tracks the percent of structurally deficient deck area for bridges on the National Highway System.

**MEASUREMENT AND DATA COLLECTION:**  
The NHS is defined by federal law and consists of all roadways functionally classified as principal arterials as well as some routes that serve as major connections to multimodal freight-type facilities and some locally owned roadways. Historically, structurally deficient consists of bridges that are in bad condition or have insufficient load capacity when compared to modern design standards. The Fixing America's Surface Transportation Act, requires states to track the structurally deficient deck area. FAST has a penalty clause that kicks in if the percentage of structurally deficient deck area within a state exceeds 10 percent.

The public has indicated keeping Missouri's existing roads and bridges in good condition should be one of the state's highest priorities. The FAST Act established a 10 percent penalty threshold for states. When the threshold is exceeded, the state is required to focus money on bridges until they were back under 10 percent. The local system has 82 NHS structures (three SD) and the MoDOT system has 3,562 NHS structures (138 SD). Missouri currently falls below the penalty threshold with the total at 6.6 percent. This is attributable to the continued efforts at focusing on major bridges when funding is available as well as the increase focus on dealing with the critical condition bridges within the STIP.

Statewide, this measure also is heavily influenced by major bridges because one structure has the ability to impact this measure +/-0.5 percent. When looking at the local system, a large bridge can have a very dramatic impact because of the small number of local structures that are part of the NHS. This is evident in the dramatic change on the local system from 2014 to 2015, which was the result of one newly deficient large structure. The changes on the state system resulted from 48 structures with a large percentage of this change coming from nine structures. The roadways that are included on the NHS are still seeing some minor adjustments, but these changes should have insignificant impacts on the overall numbers.

Every MoDOT employee is responsible for delivering outstanding customer service. We strive to be respectful, responsive, and clear in all our communication. We want to build strong relationships with our transportation partners, our customers and each other.

# PROVIDE OUTSTANDING CUSTOMER SERVICE

## Percent of overall customer satisfaction – 3a

**MEASUREMENT DRIVER:**  
Tammy Wallace  
Senior Communications Specialist

**PURPOSE OF THE MEASURE:**  
This measure tracks MoDOT's progress toward the mission of delighting its customers.

**MEASUREMENT AND DATA COLLECTION:**  
Data is collected through a biannual, in odd-numbered years, telephone survey of approximately 3,500 randomly selected Missourians. Benchmarking data is provided by the American Customer Service Index.

Over the past few years, customer satisfaction has remained high. In 2015, 81 percent of Missourians surveyed said they were satisfied with the job MoDOT is doing, which is a 4 percent decline from 2013. There also was a 7 percent decline in very satisfied customers. Data compiled by the American Customer Satisfaction Index in 2015 shows Chick-fil-A having the highest customer satisfaction rate – 86 percent – out of the hundreds of companies and government agencies the ACSI scores.

The condition of our roads and bridges and customer satisfaction are closely tied together. In the 2015 Report Card from Missourians, customers told MoDOT the condition of roads and bridges were the most important transportation service to them. However, even with present system conditions remaining good, the department's message of declining system conditions and limited funds to maintain it in the next few years potentially impacted customer perceptions and satisfaction scores.

\*2010-2011 – Lincoln Mercury, 2012 – Apple, Inc., 2013 – Mercedes Benz, 2015 – Chick-fil-A

**RESULT DRIVER:**

Communications Director

**MEASUREMENT DRIVER:**  
Jennifer Williams  
Communications Manager

**PURPOSE OF THE MEASURE:**  
This measure tracks the percent of customers who view MoDOT as a leader and expert in transportation issues. The measure shows how effectively MoDOT conveys its expertise to the traveling public.

**MEASUREMENT AND DATA COLLECTION:**  
Data is collected through a biannual, in odd-numbered years, telephone survey of approximately 3,500 randomly selected Missourians.

## PROVIDE OUTSTANDING CUSTOMER SERVICE

### *Percent of customers who view MoDOT as Missouri's transportation expert – 3b*

As the agency responsible for transportation in Missouri, MoDOT must hold its lead as an expert in the field. The department should serve as the frontrunner – representing the best transportation options for Missouri and partnering with state and national organizations and others to deliver a strong transportation system.

The 2015 survey shows an overwhelming majority of customers perceive the department as Missouri's transportation expert. Ninety-two percent of those surveyed agreed MoDOT serves this role, a percentage the department has consistently maintained since 2009. Of the 92 percent, 54 percent of respondents "strongly agreed" and 38 percent "somewhat agreed" MoDOT serves as the state's primary transportation expert.

The department continues to work on improving partnerships with all Missourians, including local government, legislators and other elected officials, and transportation-related groups and organizations. The suspension of the cost-share program coupled with Missouri's long-term insufficient transportation funding issues mean these relationships will likely face further challenges.

**Percent of Customers Who View MoDOT as Missouri's Primary Transportation Expert**

**RESULT DRIVER:**  
Fay Fleming  
Communications Director

## PROVIDE OUTSTANDING CUSTOMER SERVICE

### *Percent of customers who trust MoDOT to keep its commitments to the public – 3c*

**MEASUREMENT DRIVER:**  
Melissa Black  
Communications Manager

**PURPOSE OF THE MEASURE:**  
This measure tracks the percent of customers who trust MoDOT to keep its commitments. Public trust is an important component in building support for transportation issues.

**MEASUREMENT AND DATA COLLECTION:**  
Data is collected through a biannual, in odd-numbered years, telephone survey of approximately 3,500 randomly selected Missourians.

Gaining and keeping the public's trust is key to MoDOT's overall success. The best way MoDOT can accomplish this is to deliver on the commitments it makes. The department's annual construction program has steadily decreased in recent years, making it difficult to maintain and care for its system due to insufficient funding. Missourians tell MoDOT they want more from their transportation system, but the reality is they are going to get less – and what they have will get worse. MoDOT has spent years educating the public, legislators and media on the reality of transportation funding and what long-term insufficient funding means to Missouri's system.

The 2015 survey results indicated 85 percent of the residents trust MoDOT to keep its commitments to the public compared to 87 percent in the previous survey. Although this is only a 2 percent decrease, it is the lowest score ever recorded on this measure. Furthermore, there is a continued five-year downward trend from 92 percent in 2010 that is statistically significant.

RESULT DRIVER:  
Fay Fleming  
Communications Director

## PROVIDE OUTSTANDING CUSTOMER SERVICE

MEASUREMENT  
DRIVER:  
Jennifer Williams  
Communications Manager

PURPOSE OF  
THE MEASURE:  
This measure tracks whether  
customers feel MoDOT  
provides timely, accurate and  
understandable information  
about road projects, highway  
conditions and work zones.

MEASUREMENT AND  
DATA COLLECTION:  
Data is collected through a  
biannual, in odd-numbered  
years, telephone survey of  
approximately 3,500 randomly  
selected Missourians.

*Percent of customers who feel MoDOT provides timely, accurate and understandable information – 3d*

Just like well-maintained roads and bridges, MoDOT delivers information. The citizens of Missouri expect timely, accurate and understandable information from their department of transportation. Whether it's a press release, e-update, text alert or a notice of a public meeting, MoDOT makes every effort to get the word out as quickly and as clearly as possible. The results of this effort are public trust and respect. With numbers consistently above 90 percent agreement for the past five years, this measure shows that the department meets our customers' high expectations.

# PROVIDE OUTSTANDING CUSTOMER SERVICE

## Percent of Customers Who Feel MoDOT Provides Timely Information

## Percent of Customers Who Feel MoDOT Provides Accurate Information

## Percent of Customers Who Feel MoDOT Provides Understandable Information

**RESULT DRIVER:**  
Fay Fleming  
Communications Director

**MEASUREMENT DRIVER:**  
Melissa Black  
Communications Manager

**PURPOSE OF THE MEASURE:**  
This measure shows how satisfied customers who contact MoDOT are with the politeness, clarity and responsiveness they receive.

**MEASUREMENT AND DATA COLLECTION:**  
Data for this measure comes from a monthly telephone and e-mail survey of 200 customers who contacted a MoDOT customer service center in the previous month. The customer contacts come from call reports logged into the customer service database. Survey participants are asked to respond on an agreement scale regarding three qualities of their experiences. A fourth question is asked regarding their overall satisfaction. This measure also includes the time to complete requests logged into the customer service database. Requests requiring more than 30 days to complete are removed to prevent skewing the overall results.

## PROVIDE OUTSTANDING CUSTOMER SERVICE

### Percent of customers satisfied with MoDOT's customer service – 3e

MoDOT actively seeks feedback from the customers it serves. In 2012, MoDOT created a statewide call system and enhanced its online call report system that enables customer service representatives to work across seven district boundaries in a one-team approach. Since implementation, customer perceptions of MoDOT's politeness, responsiveness and clarity increased, resulting in improved customer satisfaction.

When comparing third quarter responses of 2016 with third quarter of 2015 we had slight decreases in all categories except one. Overall customer satisfaction decreased to 81 percent from 83 percent. Customers who were satisfied with politeness of responses increased from 96 percent to 98 percent. Clarity of responses decreased from 87 percent to 85 percent. Satisfaction with responsiveness decreased from 89 percent to 87 percent. The average time to complete customer requests during this quarter decreased from 2.1 days to 2.0 days.

## PROVIDE OUTSTANDING CUSTOMER SERVICE

### *Customer communication engagement – 3f*

#### MEASUREMENT DRIVER:

Patrick Wood  
Intermediate Communications  
Specialist

#### PURPOSE OF THE MEASURE:

This measure tracks the number of MoDOT customers hitting the department's social media and website information.

#### MEASUREMENT AND DATA COLLECTION:

MoDOT gathers information for this measure from a variety of sources including Google Analytics. Website traffic and YouTube information are cumulative totals based on visits. Facebook and Twitter information is based on account followers.

Good organizations share information with the people they serve. The best, most-trusted organizations engage customers in conversation. MoDOT often interacts with its customers through Internet-based social media networking websites and applications.

MoDOT's social media accounts continue to attract followers. When comparing the first quarters of fiscal years 2016 and 2017, there was a growth of 59,483 followers on Facebook statewide and 23,981 additional followers to Twitter statewide. During the first quarter of FY 2017, the most popular post was a DMS message encouraging the use of turn signals with the wording "Did You Run Out Of Blinker Fluid?" The post reached 210,666 people with 23,600 separate engagements to the post including reactions, comments and shares. The second most popular post warned travelers to watch for deer while driving. The post reached 203,296 people with 15,100 separate engagements to the post including reactions, comments and shares.

MoDOT's websites had 1.83 million sessions in first quarter FY 2017. In the last quarter, the top five pages on MoDOT's website were:

- Traveler Information Map
- KC Scout Homepage
- MoDOT Homepage
- Job Listings
- Gateway Guide Homepage

MoDOT videos on YouTube were viewed 91,091 times in the first quarter of FY 2017. The top five videos viewed in the last quarter were:

- Tow Plow Action Missouri
- MoDOT Tow Plows in Action
- Road 2 Tomorrow – One Year Update
- All About a Roundabout
- Zipper Merge

# PROVIDE OUTSTANDING CUSTOMER SERVICE

**RESULT DRIVER:**  
Fay Fleming  
Communications Director

## PROVIDE OUTSTANDING CUSTOMER SERVICE

### *Percent of customers who believe completed projects are the right transportation solutions – 3g*

**MEASUREMENT DRIVER:**  
Nicole Hood  
Assistant State Design Engineer

**PURPOSE OF THE MEASURE:**  
This measure provides information regarding the public's perception of MoDOT's performance in providing the right transportation solutions.

#### **MEASUREMENT AND DATA COLLECTION:**

Data for this measure is collected through an annual survey sent to users of projects completed and opened to traffic within the previous year. The districts identify 21 projects – three per district – in three categories: large, medium and small. Large projects are defined as those involving a major route or one that is funded through major project dollars. Medium projects are of district-wide importance. Small projects have only local significance. A sample of residents is drawn from zip code areas adjoining the recently completed project. The samples include 600 addresses per project area.

One of the most prominent products MoDOT delivers to its customers is a highway construction project. While the department tries to involve local residents in planning and designing local projects, the real impact of the project isn't known until people actually use the results of the project. The 2015 survey results continue to show most Missourians are very satisfied with local projects and believe that MoDOT provides the right transportation solutions.

The majority of respondents thought the project made the roadway: safer (90.7 percent), more convenient (83.7 percent), less congested (72.7 percent), easier to travel (86.7 percent), better marked (87.1 percent), and considered the project the right transportation solution (89.3 percent).

As part of the questionnaire, each respondent has the opportunity to provide comments about why the local project was – or was not – the right transportation solution. Each comment is shared with the local district for evaluation and to guide future projects.

MEASURES OF DEPARTMENTAL PERFORMANCE

MoDOT customers expect transportation solutions delivered on time and within budget. We manage our projects to get them completed quickly and at the best possible value. We work with our transportation partners to leverage innovation in improving our products and how we work. We pledge to honor our commitments and deliver the best, most cost-effective solutions.

## RESULT DRIVER:

Eric Schroeter  
State Design Engineer

## MEASUREMENT

### DRIVER:

Renate Wilkinson  
Planning and Programming  
Engineer

## PURPOSE OF THE MEASURE:

The measure determines how close total project costs are to the programmed costs. The programmed cost is considered the project budget.

## MEASUREMENT AND DATA COLLECTION:

Completed project costs are reported during the fiscal year in which a project is completed. Road and bridge project costs include design, right-of-way purchases, utilities, construction, inspection and other miscellaneous costs. The programmed cost is based on the amount included in the most recently approved Statewide Transportation Improvement Program. Completed costs include actual expenditures. Multimodal and local public agency project costs typically reflect state and/or federal funds but not local funding contributed toward such projects.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## *Percent of programmed project cost as compared to final project cost – 4a*

Accurate program cost estimates help MoDOT deliver more timely improvements for taxpayers. As of September 30, 2016, 142 road and bridge projects were completed in fiscal year 2017 at a cost of \$326.9 million. This represents a deviation of 3.8 percent (or \$13 million) less than the programmed cost of \$339.8 million. Of the 142 road and bridge projects completed, 46 percent were completed within or below budget. In comparison, 51 percent of projects were completed within or below budget as of the same date a year ago. The largest component of project savings comes from engineering at \$5 million. Award savings were \$4 million. Miscellaneous savings (right-of-way purchases, utilities and other costs) were \$3 million. Construction-phase savings were \$1 million.

In addition, 15 multimodal projects were completed at a cost of \$3.4 million, 5.31 percent or \$172,000 more than the programmed cost of \$3.2 million. A total of 42 local public agency projects were completed at a cost of \$26.4 million, 3.46 percent or \$900,000 less than the programmed cost of \$27.3 million.

There was a small adjustment to the final 2016 values, resulting in the road and bridge percentage changing from 2.65 to 2.64 percent.

MoDOT uses this historical data as a guide for programming future projects. Projects awarded in FY 2014 and 2015 were 1 percent higher and 2 percent lower, respectively, than programmed values. Consequently, the 2015-2019, 2016-2020 and 2017-2021 STIPs were developed assuming no significant award savings. Projects awarded in FY 2017 through September were 6.5 percent more than programmed values.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## Percent of Programmed Project Cost as Compared to Final Project Cost

Positive numbers indicate the final (completed) cost was higher than the programmed cost. Comparative data is from Nebraska Department of Roads, one-year schedule of highway improvement projects. 2016 data is not yet available.

## Final Project Cost Differences by Phase STIP Road and Bridge Projects Only

Negative numbers indicate savings. Miscellaneous includes right-of-way purchases, utilities and other costs.

## Difference in Program vs Award STIP Road and Bridge Projects Only

Amounts include STIP road and bridge projects with 2 percent construction contingency applied.

RESULT DRIVER:  
Eric Schroeter  
State Design Engineer

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## Percent of projects completed on time – 4b

### MEASUREMENT DRIVER:

Jay Bestgen  
Assistant Construction and Materials Engineer

### PURPOSE OF THE MEASURE:

This measure tracks the percentage of projects completed by the commitment date established in the contract. This includes road, bridge, local public agency and multimodal projects – rail, aviation, waterway and transit.

### MEASUREMENT AND DATA COLLECTION:

For road and bridge projects, the project manager collaborates with the project team to establish the project completion day which is specific to when the road or bridge project will be opened to the public so to eliminate a financial penalty. The resident engineer uses the SiteManager system to track and document the work. Local public agencies and multimodal agencies use staff or consultant resources to set contract completion dates and track performance.

MoDOT's customers expect transportation improvements to be completed quickly with minimal impact to their lives. Delivering projects by the contract completion date is the target for all projects and is considered a commitment to Missourians and drivers. Completing projects on time helps maintain credibility with Missourians. Completing projects on time minimizes drivers' exposure to work zones and provides facilities in good condition that improve safety and reduce vehicle maintenance costs.

MoDOT works to meet the initial contract completion date by preparing accurate plans and quantities, setting aggressive but reasonable completion dates and setting liquidated damages to reinforce completion dates without undue bid risks. In the first quarter of fiscal year 2017, 68 percent of the closed-out projects were completed by their planned completion date.

Sometimes, unusual weather, additional work or a MoDOT directive necessitates an authorized extension of the completion date, without any financial assessment to the contractor. In the first quarter of fiscal year 2017, 87 percent of the closed-out projects were completed by the adjusted dates.

There also are times when a contractor misses the contract completion date and the contractor may be assessed damages. Of the road and bridge projects completed in first quarter of fiscal year 2017 that did not meet the original contract date, 37 percent were extended due to weather delays, 12 percent were extended due to extra work, 9 percent experienced utility delays, 21 percent were extended by MoDOT and 21 percent missed the completion date with damages assessed totaling \$300,100.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

\* Damages assessed totaled \$300,100 for YTD 2017.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## Total Number of Projects Completed

## Average Number of Days Completed Before Original Date

## Average Number of Days Completed After Original Date

**RESULT DRIVER:**  
Eric Schroeter  
State Design Engineer

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## MEASUREMENT DRIVER:

Jeremy Kampeter  
Construction Management System Administrator

## PURPOSE OF THE MEASURE:

This measure tracks the percentage difference of total construction payouts to the original contract award amounts. This indicates how many changes are made on projects after they are awarded to the contractor for road, bridge, local public agency and multimodal projects – rail, aviation, waterway and transit.

## MEASUREMENT AND DATA COLLECTION:

For road and bridge projects, contractor payments are generated through MoDOT's SiteManager database and processed in the financial management system for payment. Change orders document the underrun/overrun of the original contract cost. Local public agencies and multimodal agencies use staff or consultant resources to set contract completion dates and track performance.

## *Percent of change for finalized contracts – 4c*

By limiting overruns on contracts, MoDOT can continue to keep its maintenance and construction commitments. This emphasis combined with the use of practical design and value engineering has contributed to limiting overruns on contracts. MoDOT's performance in the first quarter of fiscal year 2017 is 0.9 percent over (\$2.3 million over the award amount of \$264 million worth of projects completed) with 56 percent of the projects being completed below the original amount.

Many factors can affect the ability to complete a project within 2 percent of the award amount. These factors can include design changes, differing conditions, additional work items and administrative decisions.

For the first quarter of fiscal year 2017, MoDOT road and bridge projects were completed 0.7 percent over budget, the local public agency projects were completed 1.7 percent over budget and multimodal projects were completed 1.9 percent over budget.

## RESULT DRIVER:

Eric Schroeter  
State Design Engineer

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## *Innovative contracting methods – 4d*

## MEASUREMENT DRIVER:

David Simmons  
Transportation Project Manager

## PURPOSE OF THE MEASURE:

This measure tracks the use of innovative contracting methods on MoDOT projects including: A + B contracts, alternate technical concept contracts, and design-build contracts.

## MEASUREMENT AND DATA COLLECTION:

MoDOT projects utilizing innovative contracting methods are reported during the fiscal year in which they are awarded. Contract award values are collected through MoDOT's bid opening summaries and project records.

MoDOT continues to partner with the public and private sectors to deliver projects that maximize available resources into collaborative solutions that achieve goals. This collaborative effort challenges the way projects are delivered with innovation, speed and efficiency as the driving force. MoDOT pushes the boundaries to execute projects of different size and complexity using these methods.

MoDOT evaluates project characteristics (risks) such as project size (cost), type (preservation, rehabilitation or reconstruction), and complexity (opportunity for innovation and speed) when determining project delivery methods. The advantages of MoDOT's innovative contracting methods are as follows:

- Design-Build (DB) contracts include design and construction under one contract, which is procured using a two-phased, contractor-selection process. MoDOT scores proposals using a best-value or "build-to-budget" selection. Nationally, DB projects are completed 33 percent faster and six percent cheaper than conventional Design-Bid-Build projects.
- Cost-plus-time bidding (A + B) aims to expedite project completion through competitive bidding on construction time (days).
- Alternate Technical Concepts (ATCs) give the contractor the opportunity to provide a more cost-effective alternative design prior to the bid. ATC discussions are held in a confidential environment which maximizes competitive bidding. The low bid is awarded the contract.

Utilization of innovative contracting techniques to increase project value is increasing nationwide wide. Since 2002, design-build usage alone has grown 600 percent among state DOT's. The 2017-2021 STIP provides new opportunities to grow this method of project delivery on the right projects.

Based on the STIP in fiscal year 2016, MoDOT delivered only two out of 288 projects statewide using innovative contracting methods. One of them was delivered as design-build and the other delivered using the A+B process. These two projects accounted for \$25.8 million of the \$698.6 million programed budget.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

\*Reflects total number of projects for each innovative contract method.

## RESULT DRIVER:

Eric Schroeter  
State Design Engineer

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## *Value engineering – 4e*

## MEASUREMENT

### DRIVER:

Llans Taylor  
Innovations Engineer

## PURPOSE OF THE MEASURE:

This measure tracks the use of value engineering during design and construction on traditional MoDOT projects including: value analysis during the design phase, construction value engineering proposals, and implementation of best practice into standards and policies.

## MEASUREMENT AND DATA COLLECTION:

Information on value analysis during design is gathered from MoDOT's Statewide Transportation Improvement Program information management system.

Construction value engineering change proposal information is gathered from MoDOT's Value Engineering Proposal database. Implementation of best practice progress is tracked by MoDOT staff.

The goal of value engineering is to build the right project at the right time, meeting the project need with appropriate project scope. MoDOT uses the VE program to ensure the public receives great value for every tax dollar invested in Missouri's transportation system. MoDOT has been increasingly focused on smaller, maintenance-type projects that are not traditionally targeted by the VE program. Still, MoDOT must be innovative in utilizing the VE process to search for solutions to reduce project costs and provide additional value.

MoDOT uses design-phase value analysis to remove unnecessary scope, reduce project costs and improve project flexibility. For fiscal year 2016, 17 percent of projects underwent some form of value analysis during design. Programmatic value analysis studies associated with the level-course and chip-seal programs accounted for the largest portion of this percentage. Outreach continues in an effort to improve in this area and to find innovative approaches to grow this program.

MoDOT partners with industry to find more cost-effective solutions during the construction phase. Value Engineering Proposals engage contractor ideas to deliver improved projects. In fiscal year 2016, 31 VEPs were approved resulting in a MoDOT savings of \$1,558,397. This represents an 89 percent approval rate. The new Post Award Value Engineering workshop concept is currently being piloted. Outreach continues in an effort to improve in this area and to find innovative approaches to grow the VEP program.

A successful VEP program incorporates approved VEPs into future projects, in order for MoDOT to realize all of the affiliated savings. To date, 243 approved VEPs have been reviewed resulting in five revisions to policy and 19 potential items still being investigated. Each approved VEP is reviewed for potential implementation and, if necessary, to determine the appropriate champion to oversee the resulting policy or standards development.

## Value Engineering Proposals by Dollar and Number Construction Phase

DESIRED TREND 

## RESULT DRIVER:

Eric Schroeter  
State Design Engineer

## MEASUREMENT

### DRIVER:

Jason Vanderfeltz  
Bidding and Contract Services  
Engineer

## PURPOSE OF THE MEASURE:

This measure tracks the costs to construct a variety of common highway and bridge construction projects including the costs for equipment, labor and fringe benefits and materials to construct a project.

## MEASUREMENT AND DATA COLLECTION:

Data is collected from MoDOT bid opening prices. Costs for chip seal and minor road one-inch asphalt resurfacing include the pavement, traffic control and temporary pavement marking. Costs for major highway and interstate asphalt resurfacing include the pavement, traffic control, permanent pavement marking, rumble strips, pavement repair, guardrail and signing. New two- and four-lane construction costs include grading, drainage, pavement, bridge and all incidental costs. The average cost per square-foot of bridge is tabulated and applied to the area of the average bridge on the state system to simplify comparison.

# DELIVER TRANSPORTATION SOLUTIONS OF GREAT VALUE

## *Average highway lane-mile and bridge construction costs – 4f*

A great many factors affect the cost of road and bridge projects, some can be managed by MoDOT, and others are affected by the economy. For example, Missouri's highway system has long depended on fuel taxes, but consumers are turning to smaller, more fuel-efficient vehicles, and when fuel prices are high, they look for ways to decrease their personal transportation costs by driving less. Many of these smaller vehicles cost less, meaning that sales taxes are lower and consequently so are transportation revenues. Meanwhile, inflation has increased the cost of projects, resulting in reduced purchasing power for MoDOT. Minor road asphalt resurfacing costs have increased in recent years due to a combination of fluctuating fuel and oil prices and increased material costs. Overall, the prices of asphalt, concrete and steel are double or triple what they were 20 years ago.

With MoDOT's construction program having dropped from \$1.3 billion in 2009 to \$596 million in fiscal year 2016, few complex two- and four-lane projects have been available for contractors to bid. For the larger, more robust projects, MoDOT continues to partner with industry to allow flexibility and encourage innovation while strategically scheduling bid openings to spread out the amount of work and financial obligation for the bidders.

MEASURES OF DEPARTMENTAL PERFORMANCE

Missourians expect to get to their destinations on time, without delay regardless of their choice of travel mode. We coordinate and collaborate with our transportation partners throughout the state to keep people and goods moving freely and efficiently. We also maintain and operate the transportation system in a manner to minimize the impact to our customers and partners.

**RESULT DRIVER:**  
Becky Allmeroth  
State Maintenance Engineer

# OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

**MEASUREMENT DRIVER:**  
Alex Wassman  
Senior Traffic Studies Specialist

**PURPOSE OF THE MEASURE:**  
This measure tracks the mobility of significant state routes in St. Louis, Kansas City, Springfield and Columbia.

**MEASUREMENT AND DATA COLLECTION:**  
Travel time data is collected continuously via wireless technology. To assess mobility, MoDOT compares travel times during rush hour to free-flow conditions where vehicles can travel at the posted speed limit. This measure also assesses reliability, an indicator of how variable those travel times are on a daily basis. The charts in this measure show the average travel time and the 95th percentile travel time, which is the time motorists should plan in order to reach their destinations on time 95 percent of the time. The maps display the mobility of specific sections of roadways during rush hour.

## *Travel times and reliability on major routes – 5a*

From July to September 2016, travel times in St. Louis and Kansas City were similar to the same period last year. In the third quarter of 2016, the average 10-mile travel time in St. Louis was 10.91 minutes during the morning and 12.29 minutes during the evening. For Kansas City, the average travel time was 10.81 minutes during the morning and 11.42 minutes during the evening. Overall, average speeds ranged between 49 and 56 mph.

The planning times account for unexpected delays and indicate how long customers needed to plan in order to arrive on time 95 percent of the time. In St. Louis, the average 10-mile planning times were 14.72 minutes during the morning and 18.38 minutes during the evening. This means customers in the St. Louis evening rush needed to plan eight minutes and 23 seconds more for a 10-mile trip than they would need in free-flow conditions. In Kansas City, the average planning times were 14.06 minutes during the morning and 15.06 minutes during the evening. Customers in the Kansas City evening rush needed to plan just over five minutes more for a 10-mile trip than they would need in free-flow conditions. The planning times in St. Louis and Kansas City represent average rush-hour speeds between 33 and 53 mph. Both planning and travel times during evening rush returned to first quarter 2016 levels after a significant spike in second quarter 2016.

Individual freeway segments within the regions experienced longer travel times than the regional averages as depicted in the maps. The maps also depict rush-hour conditions on selected arterial routes compared to normal traffic flow during non-peak traffic conditions.

## OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

MEASUREMENT DRIVER:  
Jeanne Olubogun  
District Traffic Engineer

PURPOSE OF THE MEASURE:  
This measure tracks the annual cost and impact of traffic congestion to motorists for motorist delay, travel time, excess fuel consumed per auto commuter and congestion cost per auto commuter.

MEASUREMENT AND DATA COLLECTION:  
A reporting tool available in the Regional Integrated Transportation Information System looks at user delay costs. This data, in combination with industry standard costs for passenger cars and trucks, reflects the overall costs of congestion. RITIS also includes historic data so trend lines can be tracked and evaluated. The unit cost per passenger car is \$17.67 per hour and is obtained from the Texas A&M Transportation Institute. The unit cost per truck is \$68.09 obtained from the American Transportation Research Institute, which specializes in tracking freight mobility and provides the best source of data related to freight costs. For previous reporting, the department used data provided by the TTI, which annually produces the Urban Mobility Report.

### *Cost and impact of traffic congestion – 5b*

Recurring congestion occurs at regular times, although the traffic jams are not necessarily consistent day-to-day. Nonrecurring congestion is an unexpected traffic crash or natural disaster that affects traffic flow. When either occurs, the time required for a given trip becomes unpredictable. This unreliability is costly for commuters and truck drivers moving goods, which results in higher prices to consumers.

While the desired trend for both costs is downward, challenges exist in Missouri's metropolitan regions to continue toward this desired outcome. A comprehensive look at congestion is needed, looking beyond typical solutions of adding capacity. Using smarter technology to help guide motorists is a must. Still, the desired outcome is lower congestion costs and an indication that traffic is moving more efficiently.

## OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

*Average time to clear traffic incident – 5c*

**MEASUREMENT DRIVER:**  
Randy Johnson  
Traffic Center Manager

**PURPOSE OF THE MEASURE:**  
This measure is used to determine the trends in incident clearance on the state highway system.

**MEASUREMENT AND DATA COLLECTION:**  
Advanced transportation management systems are used by the Kansas City and St. Louis traffic management centers to record incident start time and the time when all lanes are declared cleared. Traffic incidents can be divided into three general classes of duration set forth by the Manual on Uniform Traffic Control Devices that include minor, intermediate and major. Each class has unique traffic control characteristics and needs.

A traffic incident is an unplanned event that blocks travel lanes and temporarily reduces the number of vehicles that can travel on the road. The speed of incident clearance is essential to the highway system returning back to normal conditions. Responding to and quickly addressing the incident (crashes, flat tires and stalled vehicles) improves system performance.

St. Louis recorded 2,552 incidents in the past quarter. The average time to clear traffic incidents was 25.3 minutes, a decrease of 8.6 percent compared to the third quarter of 2015.

Kansas City recorded 1,639 incidents in the past quarter. The average time to clear traffic incidents was 26.4 minutes, an increase of 8.6 percent from the third quarter of 2015.

No two incidents are the same, but Kansas City and St. Louis use communication, coordination and data to try reducing the average time to clear. St. Louis has used outreach for the 'steer it clear' law to educate the public and first responder partners. Kansas City and St. Louis have coordinated within district for traffic incident management training for those that may respond to an incident. Coordination continues to be a focus and both districts meet regularly to share and learn best practices from each other. Kansas City has recently used data and performance measures to adjust to a corridor emphasis during peak hours in lieu of a larger zone. Major incidents can have a drastic impact on the average time to clear, such as the tractor trailer incident on US 50 that lasted nearly six hours.

# OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

## Traffic incident impacts on major interstate routes – 5d

**MEASUREMENT DRIVER:**  
Rick Bennett  
Traffic Liaison Engineer

**PURPOSE OF THE MEASURE:**  
This measure tracks the traffic incident impacts on Interstate 70 and Interstate 44 due to highway incidents.

**MEASUREMENT AND DATA COLLECTION:**  
Interstate route closures having an actual or expected duration of 30 minutes or more are entered into MoDOT's Transportation Management System for display on the Traveler Information Map. By using the incident locations identified from the Traveler Information Map data along with the Regional Integrated Transportation Information System, real-time durations and delays for these incidents can be identified. The impact duration is the total amount of time that there was a noticeable impact on traffic speeds as a result of the incident regardless of how long the actual incident closure lasted. The maximum delay is the longest delay that an individual traveler would have experienced as a result of the incident. What is important about these measurements is that they represent the impacts that are "felt" by our customers resulting from incident closures.

Interstates are the arteries that connect our nation and keep people and commerce flowing. When they shut down in Missouri, the country is cut in half. Keeping interstates free-flowing is a top priority for MoDOT, but sometimes vehicle crashes affect the department's ability to keep the interstates moving.

The I-70 and I-44 charts give a comparison of the duration of the incidents and the actual delay experienced by the travelers as provided by the RITIS tool. Due to the ongoing integration of the systems used by our Traffic Management Centers (TMCs) in St. Louis and Kansas City with the MoDOT Traveler Information Map, the incident data is not available in an accurate form this quarter. These charts are shown as under development until the integration is complete and we are able to get consistent and accurate data. The final map provides a picture of where the incidents are occurring over a full year to see the areas with higher concentrations of incidents.

MoDOT continues to work with emergency response partners to minimize the delay caused by closures on the interstate system. This measure provides more information so staff can focus on the incidents with higher "real" impact to travelers. This information is used to develop and implement strategies and best practices to reduce the impacts to travelers.

### Top 10 Incidents by Delay July - September 2016

Route	County	Dir	Mile Marker	Date	Impact Duration (hrs:min)	Max Delay (hrs:min)
I-70	LAFAYETTE	E	47	9/26/2016	5:30	4:58
I-44	GREENE	E	88	7/11/2016	4:10	4:10

# OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

**MEASUREMENT DRIVER:**  
Jerica Holtsclaw  
Design Liaison Engineer

**PURPOSE OF THE MEASURE:**  
Work zones are designed to allow the public to travel through safely and with minimal disruptions. This measure indicates how well significant work zones perform.

**MEASUREMENT AND DATA COLLECTION:**  
Work zone impacts are collected by conducting visual observations or using automated data collection. Recent updates to traffic data collection methods allow for more work zones to be evaluated. An impact is defined as the additional time a work zone adds to normal travel. They are categorized into three levels: a minor impact that lasts less than 10 minutes; a moderate impact that lasts 10 to 14 minutes; and a major impact that lasts 15 minutes or more.

## *Work zone impacts to the traveling public – 5e*

Motorists want to get through work zones with as little inconvenience as possible. MoDOT tries to minimize the travel impacts by shifting work to nighttime hours or during times when there are fewer impacts to the traveling public. To get a wider range of data and a better understanding of the impact work zones have on motorists, the department has increased the number of work zones it monitors each quarter.

MoDOT monitored 129 significant work zones this quarter, with 54 major impacts and 63 moderate impacts. The significant projects this quarter that accounted for the most impacts were Columbia I-70 Bridge Repairs, Missouri River Bridge painting in Jefferson City and I-70 bridge repairs in St. Louis. This brings the year-to-date totals to 343 work zones monitored with a total of 80 major impacts and 118 moderate impacts.

Based on work zone surveys received through this year, 45 percent of motorists are satisfied with timeliness when traveling in a work zone.

RESULT DRIVER:  
Becky Allmeroth  
State Maintenance Engineer

## OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

### *Effectiveness of improving air quality – 5f*

MEASUREMENT DRIVER:  
Mike Henderson  
Transportation Planning Specialist

PURPOSE OF THE MEASURE:  
This measure tracks concentrations of pollutants in on-road mobile source emissions. In other words, the department is tracking pollution caused by vehicles on the roads.

MoDOT is committed to improving air quality through modifying its daily operations, incorporating employee actions and education, providing information to the public, leading air quality improvements, managing congestion to reduce emissions, providing alternative choices for commuters and promoting the use of environmentally friendly fuels and vehicles.

MEASUREMENT AND DATA COLLECTION:  
MoDOT is still determining what pollutants to track and what concentration levels will align with the U.S. Environmental Protection Agency's air quality standards. At this time, the department collects data on oxides of nitrogen, volatile organic compounds, fine particulate matter and carbon monoxide. Because this measure is part of the latest federal surface transportation act's performance requirements, guidance for measurement and data collection will be established in 2016.

#### Effectiveness of Improving Air Quality

**UNDER DEVELOPMENT**

**RESULT DRIVER:**  
Becky Allmeroth  
State Maintenance Engineer

## OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

**MEASUREMENT DRIVER:**  
Tim Chojnacki  
Maintenance Liaison Engineer

**PURPOSE OF THE MEASURE:**  
This measure tracks the amount of time needed to perform MoDOT's snow and ice removal efforts.

**MEASUREMENT AND DATA COLLECTION:**  
For major highways and regionally significant routes, the objective is to restore them to a mostly clear condition as soon as possible after the storm has ended. MoDOT calls these "continuous operations" routes. State routes with lower traffic volumes should be opened to two-way traffic and treated with salt or abrasives at critical areas such as intersections, hills and curves. These are called "non-continuous operations" routes. After each winter event, maintenance personnel submit reports indicating how much time it took to meet the objectives for both route classifications.

### *Time to meet winter storm event performance objectives – 5g*

Knowing the time it takes to clear roads after a winter storm can help the department better analyze the costs associated with that work. MoDOT's response rate to winter events provides good customer service for the traveling public while keeping costs as low as possible.

The 2015-2016 winter was relatively light with less than average winter precipitation. It took an average of 3.3 hours to meet MoDOT's objective for continuous operations routes, and an average of 4.7 hours for non-continuous routes. These numbers compare favorably with the type of storms received and our historical performance.

Winter operations, on average, cost about \$46.8 million dollars per year. As of March 31, 2016, MoDOT has expended \$22.9 million dollars responding to events this winter. The money and time spent on clearing the roads of snow and ice means funds are not available to maintain the roadways in the spring, such as surface improvements, sign repair, brush cutting and drainage work.

# OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

## *Bike/pedestrian and ADA transition plan improvements – 5h*

**MEASUREMENT DRIVER:**  
Ron Effland  
Non-motorized Transportation Engineer

**PURPOSE OF THE MEASURE:**  
This measure tracks MoDOT's investment in pedestrian facilities and progress toward removing barriers. Accessibility needs occur both within the right of way, such as sidewalks and traffic signals, and within department buildings, parking lots and restrooms. Removal of the barriers listed in MoDOT's 2010 Transition Plan is required as part of the department's compliance with the Americans with Disabilities Act.

**MEASUREMENT AND DATA COLLECTION:**  
Tracking of MoDOT's investment in pedestrian facilities is done by collecting awarded contract amounts for the 20 most common construction elements used on pedestrian projects each year. Transition Plan progress is based upon completed work that has corrected defective items reported in the August 2010 Transition Plan inventory. The dollar amounts are based on unadjusted estimates from 2008 and will not reflect actual expenditures. This avoids impacts from inflation or changing field conditions. A Progress Target line is included to show where MoDOT progress should be in order to fully complete the Transition Plan by 2027.

While MoDOT has improved more than \$17.1 million of deficient ADA facilities in the right of way since 2008, additional work totaling more than \$134.2 million is still necessary to complete the 2010 ADA Transition Plan inventory by August 2027. To meet the MHTC commitment, MoDOT needs to be improving more than \$12.2 million of improvements each and every year until 2027.

MoDOT's annual investment in pedestrian facilities for the first three quarters of 2016 totaled \$5.9 million; however, in the third quarter the total awarded was only \$701,172 of the total for the year so far. In 2014, the annual investment was an all-time high of \$11.7 million. Since 2008, MoDOT has invested more than \$60.7 million in pedestrian facilities statewide.

So far in calendar year 2016, a total of only \$755,000 has been completed in right of way improvements.

In February 2016, the Commission increased funding available to the districts for use on correcting ADA transition plan items by \$5 million annually. This new funding source is intended to be additional funding beyond current programmed amounts so districts can begin to make substantial progress toward meeting the 2027 commitment.

MoDOT has committed to complete the ADA transition plan improvements, including cross slope corrections, as work is being done on the adjacent roadway section or by standalone projects by August 2027.

## OPERATE A RELIABLE AND CONVENIENT TRANSPORTATION SYSTEM

### MEASUREMENT

DRIVER:  
Amy Ludwig  
Administrator of Aviation

### PURPOSE OF THE MEASURE:

This measure tracks  
passenger use of non-highway  
modes of transportation in  
Missouri.

### MEASUREMENT AND DATA COLLECTION:

Ferry passenger data is compiled from the New Bourbon and Mississippi County ferryboats, services owned and operated by Missouri public port authorities. Amtrak supplies Missouri River Runner passenger counts. Urban and rural transit services provide transit passenger data, with Wisconsin as the benchmark. Airline passenger counts are obtained from the Federal Aviation Administration. The state of Maryland is the benchmark due to its comparable population.

Ferryboat and rail data is updated quarterly while aviation and transit data is updated annually in October.

### *Use of non-highway modes of transportation – 5i*

Planes, trains, ferries and transit are vital means of transport for Missourians. Alternative modes of transportation connect Missourians to work, healthcare and other necessary activities. They also are used to grow Missouri's economy and create jobs. Missouri's current transportation funding for these modes is inadequate and unreliable. The state is unable to meet even the existing needs for these important transportation system components.

The number of ferryboat passengers for the first quarter of fiscal year 2017 totaled 12,916, a decrease of 785 from the 13,701 passengers for the same period last year. The Mississippi County ferry service saw an 18 percent increase in ridership, while the New Bourbon service saw a 27 percent decrease. New Bourbon's ferry was closed for the month of July for repairs necessary for the ferry's US Coast Guard inspection and recertification.

Ridership on Missouri River Runner trains declined slightly with 45,656 riders in first quarter FY 2017 compared 46,937 riders in first quarter FY 2016. Low gas prices and construction on the high-speed rail corridor between St. Louis and Chicago continue to impact ridership, but the effects appear to be leveling off, aided by 86 percent on-time performance.

Transit ridership (passenger boardings) showed a decrease from 62.8 million trips in FY 2015 to 59.1 million trips in FY 2016. Urban ridership, which accounts for more than 95 percent of the ridership totals for the state, decreased 6.1 percent in FY 2016, while rural ridership increased 1.1 percent in FY 2016. The overall decrease in ridership in FY 2016 can be attributed to low gas prices.

The number of airline passengers has remained fairly steady from 2011 to 2015, with a slight increase in passenger enplanements (boardings) for 2015. In July 2016, MoDOT issued air service grants to commercial service airports. These grants can be used for air service promotion and marketing and to study potential new routes. The ability to issue these grants is tied to the amount of revenue deposited in the state Aviation Trust Fund per calendar year. Due to declining revenues, it is possible air service grants will not be issued in FY 2018.

MoDOT has access to many resources including people, funding, supplies and equipment. Taxpayers trust MoDOT is a good steward of these limited resources while limiting the impact on our environment. We are accountable for everything we do.

**RESULT DRIVER:**  
 Brenda Morris  
 Financial Services Director

# USE RESOURCES WISELY

## Number of full-time equivalencies expended – 6a

**MEASUREMENT DRIVER:**  
 Aaron Kincaid  
 Employment Manager

**PURPOSE OF THE MEASURE:**  
 This measure tracks the change in the number of full-time equivalencies (a calculation of hours) expended within the department and compares it to the number of FTEs in the legislative budget.

**MEASUREMENT AND DATA COLLECTION:**  
 This measure converts the regular hours worked or on paid leave of temporary and salaried employees, as well as overtime worked (minus any hours that are flexed during the workweek), to FTEs. In order to calculate FTEs, the total number of hours worked or on paid leave is divided by 2,080. For comparison purposes, data for salaried employment is annualized, whereas temporary employment and overtime data represent actual year-to-date calculations. Salaried headcount is different than FTEs and is not included in the chart.

Having the right number of employees to provide outstanding customer service and respond to the state’s transportation needs, especially during emergency situations, is an important part of MoDOT’s effort to use resources wisely.

During fiscal year 2017, the FTE levels for salaried employment have increased compared to the same time last fiscal year. FTEs for salaried employment have increased mainly due to overstaffing in field maintenance. FTEs for temporary employment, as well as overtime worked, have remained relatively consistent compared to the same time last fiscal year.

RESULT DRIVER:  
Brenda Morris  
Financial Services Director

## USE RESOURCES WISELY

### *Level of job satisfaction – 6b*

MEASUREMENT  
DRIVER:  
Rudy Nickens  
Equal Opportunity and  
Diversity Director

PURPOSE OF  
THE MEASURE:  
This measure tracks the level  
of employee satisfaction  
throughout the department at  
specific points in time.

MEASUREMENT AND  
DATA COLLECTION:  
Employee satisfaction is  
measured with an annual  
employee survey. Employees  
rate items related to their  
satisfaction with MoDOT using  
a five-point scale, with one  
indicating low satisfaction and  
five indicating high satisfaction.  
Society for Human Resources  
Management best practice  
data was gathered from an  
SHRM report of an annual job  
satisfaction survey of 55  
Fortune 500 companies.

MoDOT wants employees to be satisfied with their work and workplace and feel like they are a good fit for their jobs. Employee satisfaction can be a driver of overall organizational performance. The more satisfied and engaged employees are with the workplace, the more discretionary effort they are willing to put forth on the job.

Between 2005 and 2010, the average employee satisfaction ratings and percent of satisfied employees both showed upward trends with peaks in 2009. Following a four-year break, the employee survey was conducted in the spring of 2014 and showed little change from the 2010 survey. Given the major organizational changes the department went through, the slight decline in job satisfaction from 3.5 in 2010 to 3.4 in 2014, and the slight decrease in the percentage of satisfied employees from 65 percent in 2010 to 64 percent in 2014 was seen as good. In fact, the percentage of very satisfied employees during that period increased from 7 percent in 2010 to 11 percent in 2014.

Following the 2014 survey, five employee-led teams worked to develop a series of recommendations to the concerns employees raised in the survey. The recommendations are in various stages of implementation.

The most recent employee survey was conducted in the spring of 2016. Overall job satisfaction increased from 3.40 in 2014 to 3.55 in 2016. The percentage of satisfied employees also increased from 64 percent in 2014 to 69 percent in 2016. The survey results also show the percentage of very satisfied employees increased from 11 percent in 2014 to 15 percent in 2016.

Areas of low satisfaction centered on not having acceptable opportunities for professional growth and not making MoDOT employees feel valued. The lack of salary increases was scored low on most surveys and dominated written comments as well. Areas of high satisfaction revolved around having a cooperative work unit and having supervisors support needs to balance work and family.

# USE RESOURCES WISELY

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

# USE RESOURCES WISELY

## Rate of employee turnover – 6c

**MEASUREMENT DRIVER:**  
Aaron Kincaid  
Employment Manager

**PURPOSE OF THE MEASURE:**  
This measure tracks the percentage of employees who leave MoDOT. Turnover rates as shown in this measure include voluntary and involuntary separations.

**MEASUREMENT AND DATA COLLECTION:**  
The data is collected statewide from SAM II Advantage HR system and includes only salaried employees. Voluntary turnover includes resignations and retirements. Involuntary turnover reflects dismissals. Data is reported quarterly, with current year-to-date data included. For benchmarked data, 2015 PWC Saratoga Benchmarks were used.

When employees leave MoDOT, the department loses a large investment in recruiting, hiring and training its workforce. While some turnover is appropriate, MoDOT needs to retain a great workforce that has the knowledge and specialized skills to deliver the department's commitments and provide outstanding customer service.

The overall turnover rate, combining the voluntary and involuntary turnover, has increased slightly from 2.68 percent in the first quarter of fiscal year 2016 to 2.79 percent in the first quarter of FY 2017. In the first quarter of FY 2017, voluntary turnover rates (51 retirements and 78 resignations) showed a slight downward trend. Involuntary turnover has increased from 5 separations (dismissals) in the first quarter of FY 2016 to 12 involuntary separations in the first quarter of FY 2017.

The increase in overall turnover is linked to an increase in dismissals. Voluntary turnover rates are decreasing slightly which may be partly attributable to recent salary adjustments. First-year turnover remains high and is the focus for the department's employee retention efforts through the onboarding program.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

**MEASUREMENT DRIVER:**  
Todd Grosvenor  
Special Projects Coordinator

**PURPOSE OF THE MEASURE:**  
This measure shows the precision of state and federal revenue projections.

**MEASUREMENT AND DATA COLLECTION:**  
State revenue for roads and bridges include motor fuel taxes, motor vehicle and driver licensing fees, and motor vehicle sales taxes paid by highway users, interest earnings and miscellaneous revenues. State revenue for other modes includes motor vehicle sales taxes, aviation fuel taxes, jet fuel sales taxes, motor vehicle licensing fees, railroad assessments, and appropriations from General Revenue and interest earnings. The measure provides the cumulative, year-to-date percent variance of actual state revenue versus projected state revenue by state fiscal year. Federal revenue for roads and bridges is the amount available to commit in a federal fiscal year of federal funds. Federal funds are distributed to states via federal law. Federal revenue for other modes is the amount reimbursed to MoDOT for expenses incurred in a state fiscal year.

## USE RESOURCES WISELY

### *State and federal revenue projections – 6d*

State and federal revenue projections help MoDOT staff do a better job of budgeting limited funds for its operations and capital program. The desired trend is for actual revenue to match projections with no variance.

The actual state revenue for road and bridge from motor fuel taxes, motor vehicle sales taxes, motor vehicle and driver licensing fees, and miscellaneous was 3.3 percent more than projected through the first quarter of fiscal year 2017. The majority of the increase is related to motor fuel taxes and motor vehicle sales taxes. The negative variance of 4.7 percent for non-highway modes is mostly attributable to the jet fuel sales tax.

The largest source of transportation revenue is from the federal government. Funding is received through various federal transportation agencies including Federal Highway, Transit, Aviation and Railroad Administrations. In December 2015, Congress passed a five-year federal transportation reauthorization act entitled Fixing America's Surface Transportation Act. The FAST Act increases the amount of road and bridge funding for all state transportation departments. Federal revenue for other modes is reliant on the timing of project expenditures.

The primary source of federal and state revenue is motor fuel tax. The motor fuel tax rates have not changed in more than 20 years, while the costs for materials and labor have doubled, and even tripled for some materials, in the same timeframe.

## USE RESOURCES WISELY

### *Number of dollars generated through cost-sharing and partnering agreements for transportation – 6e*

MEASUREMENT DRIVER:  
Frank Miller  
District Planning Manager

PURPOSE OF THE MEASURE:  
This measurement monitors the effectiveness of MoDOT's cost-sharing and partnering programs.

MEASUREMENT AND DATA COLLECTION:  
MoDOT collects this data from the Statewide Transportation Improvement Program and the permits database. The dollars are shown in the fiscal year in which construction contracts are awarded and permit jobs are issued. The percent is the number of cost-sharing projects divided by the total number of projects per year in the STIP.

MoDOT works with public agencies to leverage its limited resources to implement projects that might not otherwise be built. The Missouri Highways and Transportation Commission suspended MoDOT's statewide Cost Share Program in January 2014, not awarding any funding beyond FY 2017. In addition to the Cost Share Program, MoDOT occasionally partners with other agencies to deliver transportation projects with district funds. MoDOT also competes for discretionary federal transportation funding to improve the state transportation system. In addition, MoDOT partners with developers and other private entities to make improvements to the state transportation system through the permitting process.

The amount of funds invested by partnering entities in MoDOT projects has generally been on a gradual decline – with the notable exception of FY 2015. During FY 2015, there were several large partnership projects including the Fairfax Bridge in Kansas City, cost shared with Kansas, as well as several significant local agency projects on the state system. By FY 2016, external partnering returned to an amount more in line with that occurring from FY 2012 to FY 2014. External partner investment in FY 2016 was \$69 million, which is down significantly from \$142 million in FY 2015, but much closer to the \$76 million annual investment previously received in FY 2013 and FY 2014.

The percent of projects with funding participation from partnering agencies has also declined from 17.8 percent in FY 2015 to 9.4 percent in FY 2016. The percent of projects involving partnering funds is the same as FY 2012, but is below the average annual percentage of projects with partnering funds over the five-year period, which is 11.6 percent.

As a greater share of MoDOT funds are focused on taking care of the system, partner contributions to MoDOT projects are expected to continue to decline. The value of permit projects may increase if the economy continues to improve and public and private entities fund expansion projects to address emerging needs that MoDOT cannot address with its funding.

### Number of Dollars Generated Through Cost-sharing and Partnering Agreements for Highway and Bridge Projects

RESULT DRIVER:  
Brenda Morris  
Financial Services Director

## USE RESOURCES WISELY

### *Percent of state funds invested in non-highway modes of transportation – 6f*

MEASUREMENT DRIVER:  
Dion Knipp  
Administrator of Transit

PURPOSE OF THE MEASURE:  
This measurement provides the percent of state funds invested in non-highway modes of transportation. Modes include aviation, rail, transit, waterways and freight.

MEASUREMENT AND DATA COLLECTION:  
Investments in non-highway modes of transportation represent the state and federal dollars spent on aviation, rail, transit, waterways and freight. Federal investments represent the amount spent on MoDOT-administered programs only. Investments are limited to the amounts appropriated by the state legislature each year.

During the long-range planning process, “On the Move,” Missourians chose more transportation choices as a top priority. MoDOT works closely with its multimodal partners to provide more choices within the available funding amounts. In fiscal year 2016, state and federal expenditures for multimodal programs increased \$4.2 million and \$4.1 million, respectively.

Aviation – State expenditures increased from \$6.5 million to \$7.2 million and federal expenditures increased from \$21 million to \$28 million. In FY 2016, state funds were 20 percent of total funds invested. Federal Aviation Administration and State Aviation Trust funds require a minimum local match of 10 percent.

Rail – State expenditures increased from \$11.7 million to \$12.5 million, and federal expenditures decreased from \$17.9 million to \$16.3 million. In FY 2016, state funds were 43 percent of total funds invested.

Transit – State expenditures decreased from \$4 million to \$3.6 million, and federal expenditures decreased from \$32.6 million to \$31.4 million. In FY 2016, state funds were 10 percent of total funds invested. FTA funds require a local match of varying percentages depending on the program.

Waterways – State expenditures increased to 6.4 million in FY 2016 while federal expenditures remained at zero dollars. Local funds in FY 2016 totaled \$1.2 million. The waterways capital improvement program requires a minimum local match of 20 percent.

Freight – State expenditures increased from \$650,000 to \$850,000 and federal expenditures were zero dollars. Local funds in FY 2016 totaled \$170,000. The freight enhancement program requires a minimum local match of 20 percent.

# USE RESOURCES WISELY

**RESULT DRIVER:**  
 Brenda Morris  
 Financial Services Director

## USE RESOURCES WISELY

**MEASUREMENT DRIVER:**  
 Kenny Voss  
 Local Program Administrator

**PURPOSE OF THE MEASURE:**  
 This measure tracks the percent of available local program funds committed to projects.

**MEASUREMENT AND DATA COLLECTION:**  
 The data is obtained from the Federal Highway Administration's Fiscal Management Information System and based on the federal fiscal year from Oct. 1 through Sept. 30. The committed amounts represent what FHWA will reimburse for the project. The available amounts represent the federal program funds distributed to local sponsors. The goal of this measure is to commit all federal funds available to local public projects.

### Percent of local program funds committed to projects – 6g

Some of the federal funds MoDOT receives are required to be passed through to local entities, such as cities and counties. Available funds for local entities include those that are allocated this year and those that have not been committed in prior years. When local entities use federal funds, they provide the matching funds. Matching funds provided by local entities help MoDOT use all the transportation federal funding available to Missouri.

In federal fiscal year 2016, 102 percent (\$145 million) of the available funds have been committed to local projects. This represents a 10 percent increase in commitments compared to FFY 2015. Since FFY 2013, the percent of local program funds committed to projects has increased from 58 percent to 102 percent. The local program was able to commit more than what was available by using a small portion of anticipated FFY 2017 funds. MoDOT has met its goal of committing 100 percent of local program funds to projects for FFY 2016.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

**MEASUREMENT DRIVER:**  
Sunny Wilde  
Financial Services Coordinator

**PURPOSE OF THE MEASURE:**  
This measure tracks the percent of inactive federal projects.

**MEASUREMENT AND DATA COLLECTION:**  
The data is obtained from Federal Highway Administration's quarterly inactive projects report and is based on the federal fiscal year from Oct. 1 through Sept. 30. The inactive report includes projects with no expenditure activity for more than one year. MoDOT uses a tracking database to assist in the analysis and reporting of inactive projects.

## USE RESOURCES WISELY

### Percent of inactive projects – 6h

Project funds must be spent for taxpayers to benefit from their transportation investments. Ensuring available resources are committed to active projects is essential to maintaining the existing transportation system. Due to project schedule delays or lags in receiving project invoices, funds sometimes are not spent in a timely manner. When this happens, MoDOT analyzes projects to determine why there has been no activity and what steps need to be taken to move the project forward. Discussions with local project sponsors often are used to ensure invoices are submitted on a timely basis.

MoDOT's continued efforts have led to a decrease in the inactive projects since federal fiscal year 2013 when the inactive percent was 2.8 percent. For the fourth quarter of FFY 2016, inactive projects were 0.2 percent (\$2.1 million). Missouri's inactive projects continue to stay below FHWA's national goal of 2 percent and below the national total inactive percentage of 2.1 percent. MoDOT's efforts to identify projects that will potentially become inactive in the coming months, and taking any necessary actions on those projects, has ensured the funds committed to projects are valid.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

## USE RESOURCES WISELY

### Amount of advance construction – 6i

**MEASUREMENT DRIVER:**  
Doug Hood  
Financial Services Administrator

**PURPOSE OF THE MEASURE:**  
This measure tracks the amount of advance construction funds.

Advance construction is an innovative finance tool MoDOT uses to more efficiently manage its limited resources. Advance construction provides states the ability to move forward with projects utilizing state resources, while preserving the ability to apply and receive federal reimbursement at a later date. Advance construction helps provide the 20 percent match required for federal funds. Without advance construction, MoDOT would have had difficulty matching federal funds in the last several years.

**MEASUREMENT AND DATA COLLECTION:**  
MoDOT collects this data from Federal Highway Administration's Fiscal Management Information System. The federal fiscal year is from October 1 to September 30. Estimated Advance Construction balance for fiscal years 2016-2021 are estimates from the 2017-2021 financial forecast. The amount of advance construction is based on the total estimated project costs.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

## USE RESOURCES WISELY

### *Fleet usage and fuel efficiency – 6j*

**MEASUREMENT DRIVER:**  
Kevin James  
Assistant District Engineer

#### **PURPOSE OF THE MEASURE:**

This measure tracks progress of fleet usage compared to department thresholds based on annual mileage over the life of the equipment. The measure also tracks fuel efficiency for five vehicle classes: cars, pickups, light-duty trucks, heavy duty trucks and extra-heavy duty trucks. These classes represent the majority of fleet expenditures and miles driven.

#### **MEASUREMENT AND DATA COLLECTION:**

Data reflects performance for the vehicle based on its age. Ideal fleet usage falls within 75 to 125 percent of the vehicle's threshold. For example, a passenger car has a threshold of 15,000 miles per year. If a car is three years old, the mileage should be between 33,750 to 56,250 miles. The fleet threshold analysis graphs are updated in January and July. This measure also reports MoDOT's total fuel consumed and shows how fleet choices can affect fuel economy. The fuel data is collected in the statewide financial system. Mileage data is obtained from MoDOT's fleet management system, FASTER.

The fuel consumption measure shows a slight increase, and the fuel efficiency measure shows a decrease for the first quarter of fiscal year 2017 compared to the first quarter of FY 2016. Fuel consumption in FY 2017 has increased by 207,139 gallons compared to FY 2016. Mileage recorded for the five vehicle classes in FY 2017 has increased by 299,673 miles compared to FY 2016. During the first quarter of FY 2017, fewer gallons were used to perform flood restoration and drainage. For the same period, increases in gallons used for asphalt pavement repairs were also recorded. Increase in roadway work activities such as asphalt repairs resulted in a decrease in fuel efficiency of 0.6 miles per gallon compared to the same period last year.

The fleet threshold chart will be updated in January 2017.

# USE RESOURCES WISELY

Annual miles and/or hours threshold. Fleet threshold analysis based on life of vehicle.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

**MEASUREMENT DRIVER:**  
Sarah Kleinschmit  
Field Materials Engineer

**PURPOSE OF THE MEASURE:**  
This measure tracks MoDOT's recycling efforts in construction projects and internal operations.

**MEASUREMENT AND DATA COLLECTION:**  
The recycled material used in construction projects is measured through MoDOT's SiteManager database, which tracks material incorporated into projects. Data is collected on an annual basis due to the seasonal nature of construction. Recycled material from internal MoDOT operations, are captured from the annual Missouri State Recycling Program report and from other internal records.

## USE RESOURCES WISELY

*Number of tons of recycled material – 6k*

For more than a decade, MoDOT has incorporated recycled asphalt pavements and roof shingles into new asphalt pavements to help offset increasing costs. While the cost of rock, sand, liquid asphalt, labor, fuel and equipment have increased, recycling efforts have helped offset the cost increases. In 2015, 27 percent of the 3.8 million tons of new asphalt pavement constructed came from recycled components. Based on tonnages bid in 2015, this saved MoDOT and taxpayers about \$7 per ton, or \$15.5 million overall. The \$15.5 million savings would be equivalent to improving more than 350 miles of a two-lane roadway with a thin overlay.

MoDOT also engages in internal recycling efforts. The amount of recycled materials has decreased steadily since 2011; however, in 2015 rose slightly compared to 2014. The majority of the recycled products come from aluminum, cardboard, office paper, scrap rubber/tires, scrap metal, motor oil and antifreeze. In fiscal year 2015, 1,900 tons of scrap metal made up the majority of the recycling, followed by 330 tons of motor oil (equivalent to more than 73,000 gallons) and 220 tons of rubber/tires (equivalent to about 20,000 passenger car tires). In FY 2015, it cost more than \$236,000 to recycle some items, such as scrap rubber/tires and to shred documents. Other recycling efforts returned more than \$456,000 in revenue. The result was slightly more than \$220,000 in net revenue.

Recycling is good for the environment and helps continue to stretch available funds.

### Roofs to Roads

MoDOT is among the first state agencies in the nation to recycle shingles to resurface or rebuild highways.

# USE RESOURCES WISELY

RESULT DRIVER:  
Brenda Morris  
Financial Services Director

## USE RESOURCES WISELY

### *Number of environmental warnings and violations – 61*

MEASUREMENT  
DRIVER:  
Gayle Unruh  
Environmental and Historic  
Preservation Manager

PURPOSE OF  
THE MEASURE:  
This measure tracks the  
annual trend of compliance  
with environmental laws and  
regulations, which includes  
obtaining and abiding by  
specific requirements  
contained in various permits.

MEASUREMENT AND  
DATA COLLECTION:  
Notices of Violation are similar  
to a traffic ticket as they are  
written to indicate you are  
operating outside of legal  
limits. A Letter of Warning  
indicates that there are  
problems and, if not corrected,  
could lead to an NOV. Issued  
by environmental regulatory  
agencies, NOVs, LOWs and  
letters of satisfactory  
inspections are collected and  
tracked by location and/or  
project. The measure reports  
by calendar year the number of  
NOVs, LOWs and satisfactory  
inspections received by the  
department for any activity.

MoDOT seeks to reduce its impact on Missouri natural resources by complying with environmental laws and regulations. The department is serious about protecting human health, air, water, wildlife and ecosystems. Compliance with environmental laws and regulations helps to prevent and counteract possible damage from MoDOT activities. In addition, violations with fines assessed against MoDOT result in less funding for transportation projects.

MoDOT has a zero-tolerance policy toward any NOV from regulating agencies, such as the Missouri Department of Natural Resources or the Environmental Protection Agency. Department employees study the situations that lead to NOVs and LOWs and then take action to prevent future occurrences.

A Referral NOV (referred to enforcement) was issued in the third quarter of 2016 to MoDOT and its contractor for 12 points of failure in operating a large generator of hazardous waste for the Route 54/63 bridge over the Missouri River. The NOV included improper lead-based paint removal and disposal practices.

The other NOV for the year was from DNR for the cumulative past warnings of exceeding wastewater standards and related overdue monitoring reports for the Conway Welcome Center.

This same welcome center received a LOW in the third quarter of 2016 from DNR for exceedance of effluent limitations for total suspended solids established in the facilities operating permit.

Previously, DNR issued three LOWs and a letter of compliance with the Safe Drinking Water Law for the Conway Welcome Center. MoDOT received a LOW from DNR for not submitting an Operation and Maintenance Report for the erosion control permit. DNR also issued a letter of compliance for Long-Term Stewardship of the MoDOT Mulberry facility in Kansas City.

LOWs have ranged from three to 15 in the past five years. They have been significantly down the last two years.

# USE RESOURCES WISELY

There is no benchmark for this measure because MoDOT has a zero-tolerance policy toward NOV's. So regardless of what other states are doing, MoDOT's desired results are zero NOV's.

**RESULT DRIVER:**  
Brenda Morris  
Financial Services Director

# USE RESOURCES WISELY

## Number of stormwater violations – 6m

**MEASUREMENT DRIVER:**  
Brian Williams  
Stormwater Compliance Coordinator

**PURPOSE OF THE MEASURE:**  
This measure helps MoDOT track compliance with its stormwater permit and court ordered consent decree, which resulted from stormwater violations in 2010 and 2011. The consent decree established requirements for MoDOT projects where greater than one acre of land is disturbed.

**MEASUREMENT AND DATA COLLECTION:**

A stormwater compliance database will be used to record the compliance of MoDOT and construction contractors with the following requirements:

- maintain personnel in stormwater oversight positions;
- obtain the required stormwater training;
- ensure timely stormwater inspections and;
- ensure the resulting stormwater control repairs are completed within the required time.

The database also tracks the fines that result from not meeting the requirements of the decree. The data reported in this measure will be both the number of failures to meet the requirements and the dollar amount of the stipulated penalties that result during each quarter of the calendar year for the next three years. Data collection began in the last quarter of 2015.

MoDOT is committed to ensuring all land disturbance projects are in compliance with environmental laws through the use of adequate erosion and sediment control practices.

One consent decree violation occurred in the third quarter of 2016 for the 51 projects with greater than one acre of land disturbance. The current violation results from a post run-off report not being incorporated in the database within the required time because an employee was out due to illness. The violation has an anticipated stipulated penalty of \$100. The importance of inspection backup personnel has been stressed to ensure future absences will not result in reporting violations.

The accumulated total violations equal two while total accumulated penalties paid equal zero dollars. The Environmental Protection Agency exercised their option to waive the stipulated penalty shown for the fourth quarter of 2015. The anticipated stipulated penalties shown for the third quarter of 2016 will be documented in the annual report to the EPA in March 2017, and any mandated payments will be determined after their evaluation of the report.

**Note:** There is no benchmark data presented with this measure. MoDOT has a zero-tolerance policy toward stormwater violations. Therefore, regardless of what other states are doing, MoDOT’s desired results are zero violations and zero penalties.

# Tracker

MEASURES OF DEPARTMENTAL PERFORMANCE

Missouri's transportation system has a direct impact on the state's economy. Missouri businesses depend on our roadways, rail, waterways and airports to move their products and services both nationally and globally. An efficient, well-connected transportation system helps attract new businesses to our communities and helps existing businesses maintain a competitive edge with easy customer access, minimal shipping costs and strong links to a diverse workforce. We believe investments in transportation should create jobs and provide opportunities for advancement to all Missouri citizens. An investment in transportation should provide a positive economic impact on both the citizens we serve and the communities in which they live.

**RESULT DRIVER:**  
Lester Woods  
External Civil Rights Director

**MEASUREMENT DRIVER:**  
Eva Voss  
Senior Transportation Planner

**PURPOSE OF THE MEASURE:**  
This measure tracks the economic impact resulting from the state's transportation investments.

**MEASUREMENT AND DATA COLLECTION:**  
MoDOT works with the Economic Development Research Group to perform economic impact analyses for the state's transportation investments. The analyses are performed using a model called the Transportation Economic Development Impact System (TREDIS). The TREDIS model results demonstrate a strong link between transportation investment and economic development.

## ADVANCE ECONOMIC DEVELOPMENT

### *Economic return from transportation investment – 7a*

Investment in transportation improvements has long been held as a major economic engine that drives growth in job creation, personal income and new value added to Missouri's economy.

Based on MoDOT's 2017-2021 Statewide Transportation Improvement Program investment of \$5.5 billion, the program is estimated to create 4,343 jobs – a 53 percent increase when compared to MoDOT's 2016-2020 STIP. Transportation investments are expected to contribute \$13 billion of economic output during the next 20 years, resulting in a \$2.50 return on every \$1 invested in transportation. This year's return on investment, \$2.50, is a 2 percent increase in comparison to last year's STIP return of \$2.44.

The increase in economic return is due to the increasing construction investment of highway and bridge improvements. Though these figures tell a powerful economic story, they also are a sign of missed opportunity. Current investments must focus on maintaining our current transportation system, rather than new major projects that offer a larger economic return.

# ADVANCE ECONOMIC DEVELOPMENT

## National infrastructure ranking – 7b

**MEASUREMENT DRIVER:**  
Ben Reeser  
Long-Range Transportation Planning Coordinator

**PURPOSE OF THE MEASURE:**  
This measure analyzes the strength of Missouri's infrastructure for conducting business.

### MEASUREMENT AND DATA COLLECTION:

Data for this measure is obtained from an annual study conducted by the Consumer News and Business Channel. The study scores all 50 states on more than 60 measures of competitiveness developed collaboratively with business leaders and policy experts, as well as the states themselves. Metrics are separated into 10 weighted categories, including infrastructure. The infrastructure category receives the second highest weight and measures the following for each state:

- Value of goods shipped by air, waterways, roads and rail
- Availability of air travel
- Quality of roads and bridges
- Time it takes to commute to work
- Condition of drinking water and wastewater systems (added in 2016).

Transportation infrastructure leads to the attraction of new businesses and of employers looking to expand. These actions lead to new jobs, new opportunities and new revenue for states. A robust transportation infrastructure allows manufacturers to distribute their products quickly and inexpensively and allows citizens to get to work and to conduct business efficiently.

Prior to 2012, Missouri's national rank in transportation infrastructure was in the top nine. In 2012, Missouri decreased to 20th in the national rankings as the measure added time it takes to commute to work. The ranking improved in 2013 as the measure changed to quantity of goods shipped instead of value. Missouri's ranking declined beginning in 2014 as the measure changed back to value of goods shipped instead of quantity.

Missouri's 2016 ranking for infrastructure is 9th best in the nation. Overall, infrastructure was Missouri's highest rated area for the ten categories in the study, which included workforce, cost of doing business and quality of life. The overall ranking for Missouri is 31st best in the nation.

Missouri's infrastructure ranking will be challenging to maintain without a solution to the state's long-term insufficient transportation funding challenge.

# ADVANCE ECONOMIC DEVELOPMENT

## 2016 Transportation Infrastructure Scores by State

DESIRED TREND 

**RESULT DRIVER:**  
Lester Woods

## ADVANCE ECONOMIC DEVELOPMENT

### *National ranking in revenue per mile – 7c*

**MEASUREMENT  
DRIVER:**  
Tona Bowen  
Financial Services  
Administrator

**PURPOSE OF  
THE MEASURE:**  
This measure reports how  
Missouri's state highway  
system funding situation  
compares to that of other  
states.

**MEASUREMENT AND  
DATA COLLECTION:**  
The state revenue, highway  
mileage counts and bridge  
data used in this measure are  
gathered from Federal  
Highway Administration annual  
reports. The information is  
updated as the data becomes  
available from FHWA.

MoDOT stretches transportation revenue as far as it can in order to put as much as possible into roads and bridges. The cost to build and maintain roads and bridges increased sharply during the past 10 years due to inflation.

In fiscal year 2014, the national average for revenue per mile was \$216,533. Missouri's revenue per mile of \$50,766 currently ranks 47th in the nation. Missouri's ranking has continually declined since FY 2011 when Missouri was ranked 40th.

Missouri's state highway system, consisting of 33,873 centerline miles in FY 2014, is the seventh largest system in the nation. In addition, Missouri ranks sixth nationally in number of bridges with 10,394 bridges. New Jersey's revenue per mile of \$1,677,657 ranks first. However, its state highway system includes only 2,340 miles and 2,423 bridges.

Lester Woods  
External Civil Rights Director

# ADVANCE ECONOMIC DEVELOPMENT

## *Goods movement competitiveness – 7d*

### MEASUREMENT

**DRIVER:**  
Cheryl Ball  
Administrator of Freight and  
Waterways

### PURPOSE OF THE MEASURE:

This measure tracks the estimated cost of transporting representative Missouri products from key economic industries (chemical manufacturing, transportation equipment and agriculture) to top destinations as compared to shipping the same products from competitor states. The relative costs for these illustrative products serve as a proxy for Missouri's competitiveness on transport costs as a whole.

### MEASUREMENT AND DATA COLLECTION:

Transearch 2011 freight data was used to identify products representative of Missouri's economic drivers as well as the top origins, destinations and modes of transport. Estimates of the transport costs are calculated using different external sources for the modes: (1) The 2014 American Transportation Research Institute report, An Analysis of the Operational Costs of Trucking, (2) AAA's diesel on-highway price data, (3) the Bureau of Labor Statistics wage data, (4) the Surface Transportation Board's Uniform Railroad Costing System and (5) the USDA's Average Weekly River Barge Rates.

Product transportation costs vary depending on the efficiency, reliability, safety and modal options in a state's transportation system. Accumulation of the costs to transport in each step in the supply chain starting at product origination, to travel to the production facility and finally to market directly impacts the final cost and how competitive the product is in the global market. Transportation costs account for 9 - 14 percent of a product's market price. Therefore, maintaining low transportation costs is critical to retain and expand current businesses in Missouri and attracting new businesses to create new employment.

The three key Missouri products (soybeans, finished motor vehicles and chemical manufacturing) analyzed on the accompanying graphs combined account for more than \$8 billion in revenue annually while employing more than 300,000 Missouri workers. Missouri producers of these products compete with other states and other countries for customers. The graphs compare Missouri transportation costs to those of the closest domestic competitors. At this time, Missouri's transportation cost is among the lowest of these competitors. Maintaining low transportation costs is critical for Missouri's continued success in all markets.

Deterioration of any of the factors influencing transportation cost not only impacts the competitiveness of Missouri products in external markets, it also influences the cost to bring products into Missouri, which controls the prices at local stores.

MoDOT plays an active role in keeping costs low by working with existing businesses to identify transportation barriers that reduce their competitiveness regardless of transportation mode. These barriers can include bridges with load postings, closed bridges, rough pavement, at-grade rail crossings, congestion and inability to access a port or airport. MoDOT continually aims to find solutions for these barriers, but Missouri's transportation funding does not allow the agency's ability to fully respond to those needs.

## Freight tonnage by mode – 7e

**MEASUREMENT DRIVER:**  
Bryan Ross  
Senior Multimodal Operations Specialist

**PURPOSE OF THE MEASURE:**  
This measure tracks the amount of freight moved by Missouri's largest transportation modes.

**MEASUREMENT AND DATA COLLECTION:**  
Twice a year, a freight tonnage estimator is used to calculate the amount of freight moved by railroads and highways. The estimator provides timely information for Missouri's primary freight movers. Freight data for aviation and waterways is a combination of direct surveys and trend analysis. This measure's data is estimated yet provides an indication of current trends and movements.

Everything comes from somewhere. How it gets from place to place depends on a number of factors. These modes experience volume shifts from year to year, often based on the health of the national economy and shifts in consumer preferences. A key element to a healthy economy is a robust transportation system.

State funding cannot address transportation needs other than highways and bridges. Moving 900 million tons of freight a year requires thoughtful improvements of transportation facilities such as ports, railroads and airports. Yet many of these needs remain underfunded.

During the first half of 2016, Missouri experienced about a 5 percent decrease in freight movements as compared to the previous year. Coal shipments via rail continue to decline and are primarily responsible for the 10 percent decrease in railroad tonnage. Motor carriers continued to haul the most tonnage, which can be attributed to continued demand for durable goods shipments, which tend to move by truck. Ports experienced about an 11 percent increase in tonnage. Missouri's public ports' increased tonnage is attributed to agricultural exports in southeast Missouri and steel imports in St. Louis.

**RESULT DRIVER:**  
Lester Woods  
External Civil Rights Director

**MEASUREMENT DRIVER:**  
Aaron Hubbard  
Motor Carrier Services Project Manager

**PURPOSE OF THE MEASURE:**  
This measure is proposed to be used as a Fixing America's Surface Transportation Act national freight performance measure.

**MEASUREMENT AND DATA COLLECTION:**  
Annual hours of truck delay quantifies the extra time spent by commercial motor vehicles on an interstate corridor based upon a state-determined threshold. Missouri's threshold is set at 55 mph in St. Louis and Kansas City. All other rural areas have a threshold of 65 mph. Speeds below that rate indicate congestion and/or other delay factors for trucks. Missouri chose this threshold because many commercial trucks are governed at 65 mph even though the posted speed limit for most interstate highways is 70 mph. Commercial vehicle delays on the interstate system may be caused by congestion due to factors such as traffic, severe weather, safety inspections or roadway geometrics. AHTD is composed of vehicle miles traveled by trucks, speed of travel and the desired speed of travel.

# ADVANCE ECONOMIC DEVELOPMENT

## Annual hours of truck delay – 7f

Time is money. Delay impacts the cost of goods and reduces an organization's ability to compete on a global basis. American businesses require more operators and equipment to deliver goods when delays lengthen shipping time. Businesses must hold more inventories in more distribution centers to deliver products quickly when lengthier trips are unreliable and slow. Slow traffic also affects the local economy by reducing the number of workers and job sites within easy reach of a location.

Growth in freight volumes is a major contributor to congestion in urban areas and on intercity routes. Long-distance freight movements are often a significant contributor to local congestion, and local congestion typically impedes freight to the detriment of local and distant economic activity. Unfortunately, Missouri's long-term transportation funding is insufficient to address congestion factors.

On average, those shipping by truck can expect a delay of 13.3 minutes per trip on I-70, 29.2 minutes on I-44, 12.7 minutes on I-55 and 8.6 minutes on I-35. The annual cost of delay for the trucking industry on I-70 is \$45.7 million, \$58.1 million on I-44, \$16.9 million on I-55, and \$12.3 million on I-35.

\*2013 data contains only July through December.

**RESULT DRIVER:**  
Lester Woods  
External Civil Rights Director

# ADVANCE ECONOMIC DEVELOPMENT

## MEASUREMENT DRIVER:

Aaron Hubbard  
Motor Carrier Services Project  
Manager

## PURPOSE OF THE MEASURE:

This reliability measure is proposed to be used as a Fixing America's Surface Transportation Act national freight performance measure. By annually comparing the reliability index number for each corridor, MoDOT can determine if the corridor has become less or more reliable. A lower index for a succeeding year means reliability has improved.

## MEASUREMENT AND DATA COLLECTION:

This measure uses the Truck Reliability Index, a ratio of the total truck travel time needed to ensure on-time arrival four out of five times to the agency-determined threshold speed of 55 mph in St. Louis and Kansas City, and 65 mph in all other rural areas. The ratio is used to gauge consistency in truck freight travel times. Further guidance about data requirements and measure methodology will be forthcoming from the Federal Highway Administration.

## *Truck reliability index – 7g*

The reliable movement of goods by truck is critical to Missouri's economy. Travel time reliability is the variation of travel time for the same trip from day to day. When the variability is large, the travel time is unreliable; and, vice versa, when there is little to no variability, the travel time is reliable. Variable or unpredictable travel times make it more difficult for motor carriers and shippers to plan their travel, often forcing them to add extra time to protect themselves against the uncertainty of arrival times. This uncertainty can lead to unproductive travel decisions that waste time and money. The map includes four freight-significant corridors: I-70, I-44, I-55 and I-35. The color green indicates the most reliable travel times; yellow slightly less reliable; and red the least reliable of travel times.

In calendar year 2015 Kansas City and St. Louis metropolitan areas both improved truck travel time reliability reducing previously identified red areas. Springfield and Joplin were unchanged. I-35 South improved in Clay County near Liberty from yellow to green. I-70 East improved in Lafayette County at both Odessa and Concordia from yellow to green. I-44 East improved in Pulaski County near Waynesville from red to yellow and Franklin County near St. Clair from yellow to green. I-55 South improved in New Madrid County near Marston from yellow to green and Pemiscot County near Caruthersville from red to yellow.

MoDOT continually seeks ways to deliver the infrastructure to support reliable trips for drivers and to help keep costs down and improve travel-time reliability.

## ADVANCE ECONOMIC DEVELOPMENT

### *Jobs created by projects funded through the economic development program – 7h*

**MEASUREMENT DRIVER:**  
Doug Hood  
Financial Services Administrator

**PURPOSE OF THE MEASURE:**  
This measure tracks the number of jobs created through MoDOT's economic development program.

**MEASUREMENT AND DATA COLLECTION:**  
Data for this measure is collected from a partnership development database. This measure is based on the state fiscal year – July 1 to June 30.

The Cost Share/Economic Development Program builds partnerships with local entities to pool efforts and limited resources in order to deliver state highway and bridge projects. In the past, MoDOT allocated \$45 million of Cost Share/Economic Development funds annually based on the funding distribution formula set by the Missouri Highways and Transportation Commission. Each year, a minimum of \$5 million was set aside for projects that demonstrated economic development through job creation. MoDOT contributed up to 100 percent of the total cost for projects on the state highway system if the Missouri Department of Economic Development verified that the project created jobs. Retail development projects were not eligible.

The Missouri Highways and Transportation Commission suspended the Cost Share/Economic Development Program on Jan. 8, 2014. Projects already reviewed and approved by the cost share committee are eligible to move forward. However, no additional projects will be considered for funding.

In fiscal year 2016, Ford Motor Company created 256 verified new jobs in conjunction with interchange improvements at Interstate 35 and U.S. Route 69 in Clay County. Doyle Enterprises created 54 verified new jobs in conjunction with interchange improvements at U. S. Route 61 and County Road 334.

**MEASUREMENT DRIVER:**  
Rebecca Brietzke  
Intermediate Diversity and Inclusion Specialist

**PURPOSE OF THE MEASURE:**  
This measure tracks minority and female employment in MoDOT's workforce and compares it with availability data from the Missouri 2010 Census report.

**MEASUREMENT AND DATA COLLECTION:**  
The SAM II database is used to collect data. The Missouri 2010 Census data is used as the benchmark for this measurement. This measure is based on the state fiscal year – July 1 to June 30.

## ADVANCE ECONOMIC DEVELOPMENT

### *Percent of minorities and females employed – 7i*

By placing the right people in the right position, MoDOT can better serve its customers and help fulfill its responsibilities to taxpayers.

The number of minority employees increased by 6.6 percent (469 to 500) from the fourth quarter of fiscal year 2016 to the first quarter of FY 2017. The number of female employees increased by 0.5 percent from fourth quarter of FY 2016 to first quarter of FY 2017 (918 to 923). When compared to overall employment, the percent of females decreased (18.07 to 18.00) but is still above Missouri availability of 15.68 percent. The percent of minorities increased (9.23 to 9.75) and remains below Missouri availability of 11.77 percent. Total full-time employment during this quarter increased from 5,079 to 5,129.

During the first quarter of FY 2017, MoDOT has developed new relationships with organizations and universities that are geared toward minorities and females. MoDOT has expanded its partnership with Lincoln University to include employment preparedness training opportunities and increased presence in discipline-specific classrooms. These good-faith efforts will aid in increasing an applicant pool of qualified minorities and females.

# ADVANCE ECONOMIC DEVELOPMENT

## Percent of disadvantaged business enterprise participation on construction and engineering projects – 7j

**MEASUREMENT DRIVER:**  
Missy Stuedle  
External Civil Rights Manager

**PURPOSE OF THE MEASURE:**  
This measure tracks the percent of Disadvantaged Business Enterprise use on construction and engineering projects.

MoDOT believes it is good business to support diversity among its contractors, subcontractors and suppliers. Contractors, subcontractors and suppliers working on construction projects that receive federal aid or federal financial participation are required to take reasonable steps to ensure DBEs have an opportunity to compete for and participate in project contracts and subcontracts.

The overall DBE goal for federal fiscal year 2015 is 15.38 percent. The DBE participation for the first three quarters of FFY 2016 is 12.17 percent. This is a 0.58 percent increase from FFY 2015. Of the 12.17 percent utilization, 2.66 percent is participation from minority-owned DBE firms, 0.24 percent is participation from minority women-owned DBE firms and 9.27 percent is participation from women-owned DBE firms. The collective goals set for projects closed during this period amounted to 9.98 percent.

**MEASUREMENT AND DATA COLLECTION:**  
Data is collected through Site Manager for each construction project. The overall DBE goal is a yearly target established by MoDOT and the Federal Highway Administration regarding the expected total DBE participation on all federally-funded construction projects. Individual DBE project goals are determined by subcontract opportunity, project location and available DBE firms that can perform the scope of work. DBE utilization is tracked for each construction project identifying the prime contractor, contract amount, the established goal and how the prime contractor fulfilled the goal. This measure is based on the federal fiscal year, which is October 1 through September 30. Collection of data of the DBE classifications began in FFY 2012.

**RESULT DRIVER:**  
Lester Woods  
External Civil Rights Director

**MEASUREMENT DRIVER:**  
Debbie Rickard  
General Services Director

**PURPOSE OF THE MEASURE:**  
This measure tracks the department's non-program spending with certified minority, women, and disadvantaged business enterprises (MWDBE).

**MEASUREMENT AND DATA COLLECTION:**  
Data is obtained from the statewide financial accounting system expenditure reports and United Missouri Bank purchasing card reports. Certified vendors are maintained in a statewide procurement vendor database. Vendors may be certified through the Office of Administration as well as the Missouri Regional Certification Committee. Included in these expenditures are items such as materials, equipment, tools and supplies. Program spending, including construction, design consultants, local agencies, highway safety and multimodal programs and exempted activities such as utilities, postage, organizational memberships, conferences and travel are excluded from total dollars spent.

## ADVANCE ECONOMIC DEVELOPMENT

### *Expenditures made to certified minority, women and disadvantaged business enterprises – 7k*

Ensuring MoDOT spending is reflected in all Missouri communities advances economic development for all business enterprises. Historical data helps identify opportunities for improvement. Improvement efforts include training staff who have procurement authority, outreach to MWDBE vendors in order to encourage them to become certified and focused inclusion efforts.

Fiscal year 2017 first quarter results show a decrease of \$200,000 in MWDBE disbursements compared to the first quarter of FY 2016. Compared to first quarter FY 2016, the FY 2017 percentage of MWDBE expenditures spent decreased by 0.8.

This measure will continue to track the department's efforts to ensure the vendor pool is representative of the business community as a whole.

#### Statewide Expenditures to Certified MWDBE
