

## Waste Material for Edge Ruts

### Description

District staff screens cinder deliveries for large pieces (1- $\frac{1}{2}$ "-2") to use for edge rut repairs.

### Benefit

Removing large pieces of cinders from material used during snow fights can reduce windshield claims from motorists. The cinder material can be used to repair edge ruts without any oil reducing the cost of repairs. The material also stays in place longer by resisting washouts.

### Parts and Labor

**Total: \$0 - scrap material**

**Labor: Time to screen material**
