RC Slope Mower

Description and Benefit

This innovation is the r/c slope mower. By using the r/c mower, we can reduce or eliminate injuries on steep slopes that we would normally take care of manually with weed eaters. The R/C mower saves money because it only takes one employee to do the job of 10 with weed eaters. It saves time because its significantly faster than weed eating. It simplifies work having only one machine to maintain and upkeep to be ready for a project. It improves safety not having to have employees on steep banks do laborious work on uneven ground.
