Missouri Statewide Airports Economic Impact Study

- Missouri is served by **nine** commercial service airports in the state and **99** publicly owned, public use general aviation airports.
- Missouri's commercial service airports enplaned nearly **12 million** passengers in 2012.
- Missouri supported approximately **264,000** general aviation visitors at airports in 2012.
- Airports in Missouri support more than **420** on-airport aviation related businesses.
- More than **\$130 million** was invested in the state's airports in 2012 through updates and renovations.
- Missouri airports support **11** scheduled commercial airlines throughout the state.
- More than **195,000** tons of cargo are transported by air in Missouri each year.

Prepared by: Landrum & Brown, Incorporated | 2013

Statewide Economic Impacts

Economic Impact Study

Missouri's airport system is not only a means of safe and efficient transportation, but also provides over 100,000 jobs and accounts for more than \$11 billion in total economic activity. Each of the airports in Missouri has a specific impact on its local community that goes far beyond the local level to serve as a catalyst for economic growth.

STUDY PROCESS

Similar to the 2002 Missouri economic analysis, the economic impact generated by Missouri's airports is quantified in terms of direct, indirect, and induced economic activity and spending.

Direct impacts are based on the employment, wages, and sales generated by on-airport business activity. Common direct impacts stem from tenants like fixed-base operators (FBOs) or aircraft maintenance operations.

Indirect impacts arise from visitors arriving by aircraft and their spending on food, hotels, entertainment, transportation, and other activities. These expenditures support additional jobs, wages, and output.

Induced impacts, also referred to as multiplier impacts, are created through the "spin-off" effect of users purchasing goods and services from other local businesses and through workers spending wages and other income for household goods and services. For example, when an airport employee is paid, he or she uses their salary to purchase local goods and services at businesses in the area, which in turn spend their revenue locally, thus generating additional economic activity in the region.

Combined, the direct, indirect and induced impacts determine the total economic impacts for each airport and the statewide airport system.

IMPACT MEASURES

Jobs represent the number of people who are employed and are presented as full-time equivalent jobs.

Payroll represents the total annual wages, salaries, and benefits paid to all workers.

Output measures the value of goods, services and capital expenditures.

TOTAL JOBS	100,621
TOTAL PAYROLL	\$3,128,646,000
TOTAL OUTPUT	\$11,101,699,000

BENEFITS OF THE AIRPORT

Missouri has a diverse system of airports that serve general aviation and commercial airline needs. Of the 108 airports in the system analyzed for this study, 99 are publicly-owned, public use general aviation airports. In 2012, these 99 airports accommodated over one million aircraft operations and were home to nearly 2,500 aircraft. Missouri's general aviation airports range from turf landing strips to concrete paved runways. More than two-thirds of the general aviation airports in the state offer airport users fuel service, with more than one-third of the airports specifically offering Jet A fueling services. All of the general aviation airports serve a wide variety of aircraft, including locally based and transient traffic visiting communities for business or pleasure.

Excelsior Springs Memorial Airport is a general aviation airport located in Excelsior Springs, just north of the Excelsior Springs Golf Course in northwest Missouri. The airport is also approximately 20 minutes from Kansas City, Missouri. The City of Excelsior Springs owns and operates the airport. With its 2,000-foot long runway, the airport supports the operations of smaller general aviation aircraft.

The airport also serves as a gateway to visitors of the Excelsior Springs Golf Course and 125 year old historic Elms Resort and Spa offering a unique spa services, luxury amenities, and three eateries. The town also brings in visitors to the local wineries and bed and breakfasts. The airport also serves as a staging area to community events, hosting the annual BBQ Fly-In on the River in conjunction with the Northwest Missouri Chapter Antique Airplane Association. The fly-in offers flight demonstrations, breakfast and lunch, static aircraft displays, educational booths, games for youth, and an Experimental Aircraft Association (EAA) Young Eagles event which offers introductory flights to youth of all ages. The airport is an ideal grass-roots aviation destination offering unique one-of-a-kind events and several other fly-ins throughout the year. The airport also hosts the Northwest Missouri Antique Airplane Association meetings throughout the year.

There are numerous similar general aviation airports throughout Missouri. These airports support a variety of activities including flight training, agricultural spraying, recreational flying, and businesses that utilize small general aviation aircraft to conduct their operations. Residents, businesses, and visitors also utilize these smaller general aviation airports to enhance their quality of life. These airports are important transportation and economic resources throughout Missouri that provide both quantitative and qualitative benefits to the state.
