## Typical Applications App

### Description and Benefit

This innovation is a Power App that has all of the Typical Applications right at your fingertips. Since they are running on an iPhone you can export the Typical Application to your notes. Where you can make notes and then send them to yourself later or another person if needed. This saves time and money by no longer needing to fill out hand written forms, so no more paper wasted on printing additional TA's to make notes on. It simplifies the work because now you can pull up to a work site and have the needed TA for the particular job. It is also safer as the app pulls directly from the EPG site so you have the most up to date TA at all times.
