

Culvert Dolly

Description and Benefit

Culvert Dollies eliminate the need for an extra piece of equipment that would normally be required to move the pipes. A minimum of two dollies under each pipe makes it to where two employees can maneuver the pipe down the road and bolt the band on with ease. This saves money, time and simplifies work by not needing the extra equipment to move the pipes as well as the time to haul and move the equipment. Safety is also improved by reducing the chances of strains and sprains.
