## Tailgate Wrap

### Description and Benefit

St. Louis District needed something to enhance the visibility of our vehicles as we enter and exit the roadway. The team came up with a high-visibility tailgate wrap that was installed on the rear of all our construction vehicles. The tailgate wrap was comprised of high-vis blue/lime green stripes installed diagonally with the caption “CAUTION: FREQUENT STOPS” along with the MoDOT Emblem. The Tailgate wrap is easily adaptable to all fleet makes and models. The wrap significantly improves the visibility of the vehicle as it enters and exists the roadway while performing inspection. This also provides great visibility when vehicle is parked on the shoulder, and is very visible both at night and during the day.
