Weed Wolf

Description and Benefit

The Weed Wolf is a weed eater attachment that mounts to a zero-turn mower deck and operates on the existing belt system. This requires less PPE than weed eating. You do not need the helmet with the face shield and over the ear ear-protection. Where a zero turn goes, we would have the capabilities to weed eat at the time, instead of additional personnel and equipment having to follow behind and weed eat by hand. The Weed Wolf runs off the existing pulley system of the mower deck, so it takes no extra fuel. It eliminates the need for the additional fuel that has to be gas and oil mix for the handheld weed eater.
