

Receiver Hitch Sign Holder

Description and Benefit

This innovation is a sign holder that utilizes the metal signs that are currently used on our TMA's for the follow and backup vehicles in moving operations. It has strobe lights that either add to the pickup lighting or take over for the pickup lighting if the sign was to cover it. There are also two panic lights that are controlled by a switch in the cab to get motorists' attention. It also keeps your sign four feet above the road.
